2024 SEED GUIDE

CROPS

CORN // SOYBEAN // ALFALFA // CORN SILAGE // FORAGE SORGHUM // GRAIN SORGHUM // SPRING CANOLA // WINTER CANOLA // SUNFLOWER // HARD RED SPRING WHEAT // HARD RED WINTER WHEAT // SOFT RED WINTER WHEAT

Your Farm is Made for High Yields. You Need Corn That is, Too.

Optimize Seed ROI

To achieve farm topping yield potential, you need to do many things right. And that starts with CROPLAN® hybrids. It's seed that puts you on the path to maximizing ROI on each acre, beginning with exceptionally high performing genetics, which carry the latest traits and technology. But even bigger advantages come with the data and intelligence we build on top of these revolutionary corn hybrids.

NEW ANSWER PLOT® RESEARCH PROVIDES POPULATION, NITROGEN AND FUNGICIDE RESPONSE DATA FOR ALL CROPLAN CORN HYBRIDS.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 26.1bu/A average yield response advantage¹ when hybrids are managed according to their Response to Nitrogen (RTN).
- Then, there's a 19bu/A average yield response advantage¹ when hybrids are managed according to their Response to Fungicide (RTF), which not only guides the fungicide decision, but also the application timing.
- Testing and correlating plant populations, RTN and RTF allows CROPLAN seed to make sense of the almost infinite interactions between population, nitrogen, fungicide and yield response for each hybrid.

EACH HYBRID IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every hybrid into the same environment won't maximize your ROI. Instead, give each hybrid what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN provides this level of intelligence. And you can only find CROPLAN hybrids at the best retailers in America.

ZINC SEED TREATMENT IN THE BAG

Zinc is proven to help corn get off to a fast, healthy start and encourage stronger root development. CROPLAN is one of the only seed brands with zinc on every hybrid, in every bag, with no overtreatment or upcharge. It's a key component of our proprietary corn seed treatment – Fortivent® Plus. When you choose CROPLAN hybrids, you're gaining an agronomic edge which can help maximize ROI potential.

1. 2020 Answer Plot® trial data.

CROPLAN® TRAIT LETTERING FOR CORN HYBRIDS

Descriptive hybrid numbering and trait lettering systems are used for CROPLAN® corn hybrids.

KEY	HYBRID	TRAIT	LOGO
SS/RIB	SmartStax® RIB Complete® Corn Blend	Two built-in modes of action, to deliver maximum control of corn rootworm. As a RIB Complete® brand corn blend, means refuge compliance for the Corn-Growing Area is easier than ever. Two more sites of action provide tolerance to glyphosate and glufosinate herbicide applications.	
SSPRO/RIB	SmartStax® PRO Complete® Corn Blend	Is the next generation of protection against corn rootworm. SmartStax® PRO Technology combines the proven benefits of SmartStax® Technology with an additional, unique RNAi-based mode of action — becoming the first product with three modes of action for corn rootworm control. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
VT2P/RIB	VT Double PRO® RIB Complete® Corn Blend	Dual modes of action for maximum protection against above-ground pests, like European and Southwestern corn borers and fall armyworm. An additional site of action helps plants withstand glyphosate to prevent weeds from competing with corn. As a RIB Complete® brand corn blend, means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
RR	Roundup Ready® Corn 2	Roundup Ready Corn 2 enables consistent field-to-field weed control. Engineered for glyphosate tolerance, this technology allows you to apply Roundup® brand agricultural herbicides and other labeled glyphosate products.	
TRE/RIB	Trecepta® RIB Complete® Corn Blend	Trecepta® Technology helps reduce yield loss by protecting your corn crop from a wide range of above-ground pests. Built on the proven VT Double PRO® Technology, Trecepta Technology gives you more complete control against corn borers (European and southwestern), fall armyworm, western bean cutworm, black cutworm and corn earworm. Trecepta contains Roundup Ready 2 Technology® which allows the corn plant to withstand glyphosate treatments. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
DGVT2P/RIB	DroughtGard® VT Double PRO® RIB Complete® Corn Blend	VT Double PRO® RIB Complete® corn blend contains dual modes of action for maximum protection against above-ground pests, like European and Southwestern corn borers and fall armyworm. DroughtGard® Hybrids products are designed to help corn plants resist drought stress and minimize the risk associated with one key, unpredictable factor: The weather. The DroughtGard® Hybrids gene helps the plant create proteins that are essential for growth, helping to support yield opportunity when water is scarce. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
D	Duracade™	The Duracade™ trait stack provides multiple modes of action against corn rootworm and corn borer, as well as suppression of ear-feeding insects. This trait stack includes a novel, alternate mode of action to help preserve trait durability and delay insect adaptation for long-term field health, and the convenience of an integrated E-Z Refuge® seed blend.	

SEED TREATMENTS

Is Zinc standard on your corn seed? It is on CROPLAN.

Fortivent® Plus

By WINFIELD UNITED

GET THE BENEFIT OF EARLY SEASON PLANT VIGOR WITH FORTIVENT® PLUS.

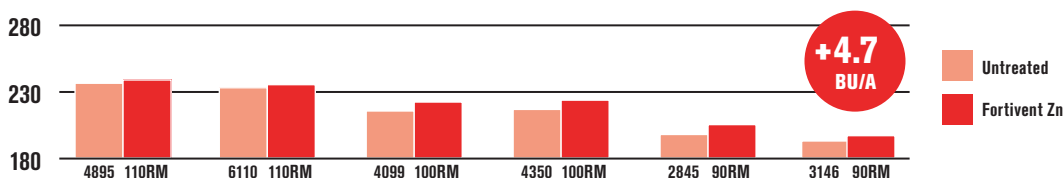

Fortivent® Plus seed treatment combines the early-season insect control of Poncho® VOTiVO® seed treatment, ethaboxam fungicide for enhanced Pythium control and Fortivent Zn for early-season corn vigor. The Poncho® insecticide at a rate of 500 mg active ingredient combined with the nematode control of VOTiVO® seed treatment is designed to help control insects, while Fortivent Zn aids in early corn development for the conversion of starch to sugar.

► Fortivent® Plus Features and Benefits

- All CROPLAN® hybrids come with Poncho® VOTiVO® seed treatment
- Provides enhanced Pythium control with ethaboxam fungicide
- Includes Fortivent Zn for success in early-season growth and root development
- Includes 100% replant offering on all CROPLAN® hybrids

UNLOCK YIELD ADVANTAGE WITH ZINC

► Fortivent Zn — 2018 Answer Plot® Testing

ACTIVE INGREDIENTS*

Insecticide

Clothianidin	500
*Clothianidin	1250

Base Fungicides (Acceleron® Seed Treatment)

Fluoxastrobin	0.24 fl. oz./100 lbs of seed
Prothioconazole	0.24 fl. oz./100 lbs of seed
Metalaxyl	0.10 fl. oz./100 lbs of seed
Ethaboxam	0.34 fl. oz./100 lbs of seed

Nematicide

Poncho® VOTiVO®	2.7 fl. oz./80,000 seeds

CROPLAN

CROPLAN CP2180VT2P/RIB

Relative Maturity: 81

Response Scores

- Position in average to high yield potential acres
- Strong vigor, stalks and roots
- Maximize yield with moderate to high populations
- Flowers early for RM, keep in zone

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	2
Drought Tolerance	3	
Root Strength	2	
Staygreen	3	
Stalk Quality	2	
Dry Down	2	
Test Weight	3	

CROPLAN CP2288VT2P/RIB

Relative Maturity: 82

Response Scores

- Excellent yield stability across all environments; strong stress tolerance
- Excellent root strength with strong stalks and Goss's wilt tolerance
- Responds to enhanced nitrogen management
- Keep in relative maturity zone

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	2	
Root Strength	1	
Staygreen	2	
Stalk Quality	2	
Dry Down	2	
Test Weight	1	

CROPLAN CP2315VT2P/RIB

Relative Maturity: 83

Response Scores

- Excellent drought tolerance to move across variable and tough acres
- Solid agronomics with strong defensive characteristics
- Manage with populations and fungicide application
- Flowers early for RM, keep in zone

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	2	
Root Strength	2	
Staygreen	3	
Stalk Quality	3	
Dry Down	2	
Test Weight	3	

CROPLAN CP2585VT2P/RIB

Relative Maturity: 85

Response Scores

- Ideally placed on productive soils
- Strong seedling vigor for planting early
- High response to nitrogen hybrid that responds well to aggressive nitrogen management
- Use caution in drought-prone, low productive soils

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	2
Drought Tolerance	3	
Root Strength	3	
Staygreen	3	
Stalk Quality	2	
Dry Down	2	
Test Weight	3	

CROPLAN CP2520RR

Relative Maturity: 86

Response Scores

- Strong stress tolerance on heavy and moderate soil types
- Excellent roots and drought tolerance
- Nice ear flex for lower populations
- Optimum emergence when planted in warm soils

Characteristics

	Not Recommended	Excellent
Seedling Vigor	3	
Drought Tolerance	1	
Root Strength	1	
Staygreen	3	
Stalk Quality	3	
Dry Down	2	
Test Weight	3	

CROPLAN CP2692D

Relative Maturity: 86

Response Scores

- Agrisure Duracade™ Artesian® trait with excellent yield potential; handles variability and multiple soil types
- Medium-tall plant with strong stalks; dual-purpose option
- Low response to population for success at lower plant densities
- Acceptable Goss's wilt tolerance; slower drydown due to girthy cob and tight husk

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	N/A	
Root Strength		1
Staygreen		1
Stalk Quality		1
Dry Down	3	
Test Weight	3

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP2790VT2P/RIB

Relative Maturity: 87

Response Scores

- High-yield potential product with strong ear flex and drought tolerance
- Excellent seedling vigor for early planting
- Strong ear flex with a moderate response-to-nitrogen; can fit a broad range of growing conditions
- Manage for late-season stalks and Goss's wilt

Characteristics

	Not Recommended			Excellent		
Seedling Vigor						1
Drought Tolerance						1
Root Strength					2	
Staygreen			3			
Stalk Quality			3			
Dry Down					2	
Test Weight					2	

CROPLAN CP2851VT2P/RIB

Relative Maturity: 88

Response Scores

- Great option for Red River Valley and East
- Solid stalks, roots, and emergence
- Semi-determinate ear; keep plant densities moderate to high
- Keep on rotated acres

Characteristics

	Not Recommended			Excellent		
Seedling Vigor			3			
Drought Tolerance			3			
Root Strength					2	
Staygreen			3			
Stalk Quality					2	
Dry Down					2	
Test Weight					2	

CROPLAN CP2845SS/RIB

[VT2P/RIB]*
Relative Maturity: 89

Response Scores

- High-yield-potential product for most soil types and environments
- Earlier flowering date and fast drydown
- High response-to-nitrogen and population optimizes yield potential
- Manage placement for Goss's wilt

Characteristics

	Not Recommended			Excellent		
Seedling Vigor						1
Drought Tolerance						1
Root Strength						1
Staygreen			3			
Stalk Quality					2	
Dry Down						1
Test Weight			3			

CROPLAN CP2965VT2P/RIB

[RR]
Relative Maturity: 89

Response Scores

- Yield leader in 85-90 RM in 2018 Answer Plot® trials
- Excellent early vigor for early planting
- Moderate response-to-population and high response-to-nitrogen help drive additional yield on average to productive soils
- Acceptable Goss's wilt tolerance

Characteristics

	Not Recommended			Excellent		
Seedling Vigor						1
Drought Tolerance					2	
Root Strength					2	
Staygreen			3			
Stalk Quality						1
Dry Down					2	
Test Weight					2	

CROPLAN CP3166VT2P/RIB

Relative Maturity: 91

Response Scores

- Well adapted for planting across yield environments and soil types
- Strong early vigor and very good stress tolerance
- Good ear flex at low populations and maintains ear size at high populations
- Acceptable Goss's wilt tolerance

Characteristics

	Not Recommended			Excellent		
Seedling Vigor					2	
Drought Tolerance					2	
Root Strength			3			
Staygreen			3			
Stalk Quality			3			
Dry Down					2	
Test Weight			3			

CROPLAN CP3314VT2P/RIB

Relative Maturity: 93

Response Scores

- Tough-acre hybrid for low-yielding environments
- Solid agronomic package
- Flex ear for variable planting populations
- Manage for Goss's wilt

Characteristics

	Not Recommended			Excellent		
Seedling Vigor					2	
Drought Tolerance					2	
Root Strength					2	
Staygreen					2	
Stalk Quality					2

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP3337VT2P/RIB

[RR]
Relative Maturity: 93

Response Scores

- Solid yield potential with early flowering enables northern movement
- Massive roots for coarse soil types and consistent silking under drought stress
- Moderate response-to-population handles variable plant densities
- Not recommended for acres with Goss's wilt history

Characteristics

	Not Recommended			Excellent		
Seedling Vigor	2					
Drought Tolerance						1
Root Strength						1
Staygreen			3			
Stalk Quality			3			
Dry Down						2
Test Weight						2

CROPLAN CP3399SS/RIB

Relative Maturity: 94

Response Scores

- Best-positioned in high-yield environments
- Medium-stature hybrid that has strong staygreen
- Optimize yield with enhanced nitrogen management
- Manage for Goss's wilt

Characteristics

	Not Recommended			Excellent		
Seedling Vigor						2
Drought Tolerance						2
Root Strength						2
Staygreen						2
Stalk Quality						2
Dry Down						2
Test Weight						2

CROPLAN CP3490VT2P/RIB

Relative Maturity: 94

Response Scores

- High-yield potential hybrid with versatility
- Strong drought tolerance allows placement on drier acres
- Excellent emergence allows for early-plant option
- Acceptable drydown

Characteristics

	Not Recommended			Excellent		
Seedling Vigor						1
Drought Tolerance						2
Root Strength						3
Staygreen						3
Stalk Quality						3
Dry Down						3
Test Weight						3

CROPLAN CP3575VT2P/RIB

Relative Maturity: 95

Response Scores

- Excels in moderate- to high-yield environments and moves across all soil types
- Strong stalk quality and root strength
- Has good ear flex for low plant densities, but will respond to higher management
- Manage for Goss's wilt

Characteristics

	Not Recommended			Excellent		
Seedling Vigor						2
Drought Tolerance						3
Root Strength						2
Staygreen						2
Stalk Quality						2
Dry Down						2
Test Weight						1

CROPLAN CP3699RR

Relative Maturity: 96

Response Scores

- Adaptable across most soil types; able to move into low-yield environments
- Consistent hybrid handles stress well with excellent emergence, roots and stalks
- Moderate response-to scores provide versatility for positioning and managing this hybrid

Characteristics

	Not Recommended			Excellent		
Seedling Vigor						1
Drought Tolerance						2
Root Strength						1
Staygreen						3
Stalk Quality						1
Dry Down						3
Test Weight						2

CROPLAN CP3715SSPRO/RIB

Relative Maturity: 97

Response Scores

- Versatile SmartStax® PRO hybrid for known CRW acres
- Strong stress tolerance and solid agronomics
- A moderate RTN score, indicates this hybrid does not need aggressive nitrogen management to thrive
- Manage in areas where gray leaf spot is a concern

Characteristics

	Not Recommended			Excellent

 Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

1 RTP/RTM/RTF Ratings
 L = Low Response
 M = Moderate Response
 H = High Response
 TBD = To be tested in 2023

2 Plant Height
 T = Tall
 M = Medium
 S = Short

3 Ear Height
 H = High
 M = Medium
 L = Low

4 Ear Flex
 FL = Flex
 SF = Semi-flex
 FX = Fixed

5 Flower Date
 L = Late
 M = Medium
 E = Early

6 Staygreen
 Late-season health coming from strong leaf-disease resistance, enhancing hybrid standability.

*These ratings reflect trends observed in research trials that change with variations in rainfall, temperature, crop production patterns and other factors. Ratings on new hybrids are based on limited data and may change as more data is collected.

**GDU's published for each product are an estimate and the actual GDUS in a given year/location can vary based upon environmental factors.

*Follow IRM guidelines and refuge configurations to preserve the benefits and insect protection of these technology crops.

Our Soybeans Stand Alone. But When We Blend Them Together, They're Even Better.

WHY WINPAK® SOYBEAN VARIETIES?

WinPak® soybeans are a unique combination of two complimentary varieties blended together to maximize yield potential and help reduce risk. They're a unique concept in soybeans, designed to handle field variability across both highly productive and stressed environments to ensure you can maximize ROI potential across diverse conditions.

EXAMPLE OF HOW A WINPAK VARIETY CAN BE FORMULATED

	VARIETY A SAMPLE	VARIETY B SAMPLE
PLACEMENT	Average to below-average yield environments.	Best-suited to productive acres.
DISEASE PACKAGE	Strong soybean white mold and iron deficiency chlorosis (IDC) tolerance.	Excellent phytophthora root rot and frogeye field tolerance.
AGRONOMICS	<ul style="list-style-type: none"> Narrow canopy type Tall height Excellent standability 	<ul style="list-style-type: none"> Bushy canopy type Medium height Average standability
STRESS TOLERANCE	Excellent stress tolerance.	Strong stress tolerance.

SOYBEAN HERBICIDE TOLERANCE AND WEED CONTROL

Creating a plan for season-long weed management is critical. And it all starts with seed selection. There are several herbicide-tolerant traits available with full commercial approval, which offer great postemergence options.

	GLYPHOSATE	GLUFONSINATE	2,4-D CHOLINE	DICAMBA
XTENDFLEX®	X	X		X
ROUNDUP READY 2 XTEND®	X			X

X	Roundup Ready 2 Xtend®	Roundup® and dicamba tolerant	
E	Enlist E3®	Glyphosate, glufosinate and 2,4-D choline tolerant	
S	STS®	Sulfonylurea tolerant	N/A

SEED TREATMENTS

Help your fields stay safe from even the stealthiest of threats.

Warden® CX II

By WINFIELD UNITED

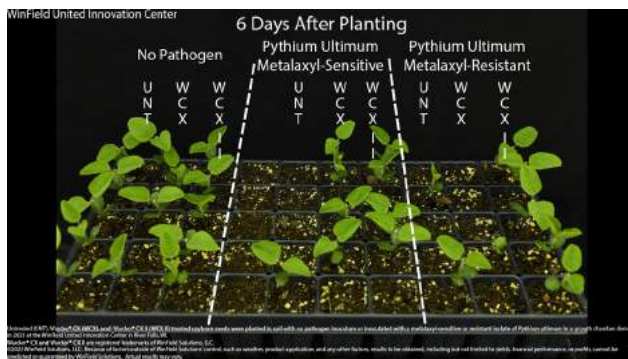

SUPERIOR DISEASE & INSECT PROTECTION FOR SOYBEANS

Warden® CX II provides broad-spectrum protection against early-season disease and insects to help improve root health, plant vigor and optimize yield potential. Built from the strong foundation of Warden® CX, Warden® CX II seed treatment includes an additional, innovative active ingredient (Vayantis®) for enhanced disease protection.

FEATURES AND BENEFITS

- Contains four fungicides for multiple modes of action against early-season disease:
 - Combination of **Vayantis® (Picarbutrazox)**, a new novel A.I., and the highest labeled rate of Mefanoxam commercially available for unprecedented control of Pythium and Phytophthora (including metalaxyl-resistant Pythium)
 - Sedaxane (Vibrance®)** for Rhizoctonia protection
 - Fludioxonil** for protection from Fusarium
- Includes active ingredient in Cruiser® insecticide (Thiamethoxam) with proven Cruiser® Vigor Effect for healthier, robust root system. Cruiser® provides protection against an array of seed- and foliar-feeding insects.
- A convenient premix formulation at a low use rate that allows for easier application and room to add products to your total seed treatment offer.
- Extra colorant and polymer providing a more vivid red color, plus improved flowability and handling at the planter, leading to better stand counts and yield potential.

IMPROVES *PYTHIUM* DEFENSE RESULTING IN IMPROVED PLANT STAND

Soybean stands increase after seed is treated with Warden CX II seed treatment versus untreated and previous iteration (Warden CX).

Important: Before use always read and follow label instructions. Crop performance is dependent on several factors many of which are beyond the control of WinField United, including without limitation, soil type, pest pressures, agronomic practices and weather conditions. Growers are encouraged to consider data from multiple locations, over multiple years and to be mindful of how such agronomic conditions could impact results. Vayantis, Apron XL, Vibrance, Maxim and Cruiser are registered trademarks of Syngenta Group Company.

Frogeye Leaf spot		2
Southern Stem Canker		2
Root-Knot Nematode	N/A	

Height	MT	Canopy Type	Int/Bush
Emergence	2	Standability	3
BSR Tolerance	NA		

- Standalone variety with top-end yield potential in tough growing conditions
- Best positioned in central and eastern regions
- Strong emergence, PRR and SDS tolerance

CROPLAN CP4122E

Group: 4.1

Characteristics

	Not Recommended	Excellent
PRR Tolerance	3	
SDS Tolerance	3	
Frogeye Leaf spot		2
Southern Stem Canker	N/A	
Root-Knot Nematode	5	

Height	MT	Canopy Type	Int/Bush
Emergence	1	Standability	2
BSR Tolerance	NA		

- High yield potential variety east to west and north to south
- Broadly adapted across soil types, yield environments and regions
- Excellent emergence; strong standability; acceptable tolerance to FELS
- Manage placement on RKN-prone acres

CROPLAN CP4324ES

Group: 4.3

Characteristics

	Not Recommended	Excellent
PRR Tolerance		2
SDS Tolerance		2
Frogeye Leaf spot		2
Southern Stem Canker		1
Root-Knot Nematode	5	

Height	MT	Canopy Type	
Emergence	1	Standability	2
BSR Tolerance	5		

- Standalone variety with excellent emergence and very good standability
- Excellent stress tolerance with very good PRR, SDS, FELS tolerance
- Stable yield potential across low and high yield environments
- Use caution in IDC prone areas

CROPLAN CP4521E

Group: 4.5

Characteristics

	Not Recommended	Excellent
PRR Tolerance		2
SDS Tolerance		2
Frogeye Leaf spot		2
Southern Stem Canker		1
Root-Knot Nematode	5	

Height	MT	Canopy Type	NA
Emergence	1	Standability	2
BSR Tolerance	NG		

- Broadly adapted variety that moves north and south well
- Acceptable FELS, SDS and SSC tolerance
- Medium height variety for clay soils with acceptable standability for lighter soils
- Manage placement in RKN-prone acres

KEY

- Scale**
- 1 = Excellent
 - 2 = Strong
 - 3 = Acceptable
 - 4 = Manage
 - 5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

NEW**CROPLAN CP4624ES**

Group: 4.6

**Characteristics**

	Not Recommended	Excellent
PRR Tolerance	2	
SDS Tolerance	2	
Frogeye Leaf spot		1
Southern Stem Canker		1
Root-Knot Nematode	5	

Height	MT	Canopy Type	Int/Bush
Emergence	1	Standability	1
BSR Tolerance	5		

- Standalone variety with very good PRR and SDS tolerance
- Excellent emergence and standability
- Excellent choice for clay soils that tend to stay wet
- Very good IDC tolerance

CROPLAN CP4541XFS

Group: 4.6

**Characteristics**

	Not Recommended	Excellent
PRR Tolerance	3	
SDS Tolerance	2	
Frogeye Leaf spot	N/A	
Southern Stem Canker		1
Root-Knot Nematode	5	

Height	T	Canopy Type	Int/Bush
Emergence	1	Standability	3
BSR Tolerance	NA		

- STS®-tolerant variety broadly adapted across soil types and yield levels
- Position broadly east to west and north to south on mixed to heavy soils
- Excluder with excellent emergence; SSC resistance
- Use caution with placement in sand on wide rows

CROPLAN CP4843XFS

Group: 4.8

**Characteristics**

	Not Recommended	Excellent
PRR Tolerance	3	
SDS Tolerance		1
Frogeye Leaf spot		1
Southern Stem Canker		1
Root-Knot Nematode	5	

Height	MT	Canopy Type	Int/Bush
Emergence	1	Standability	3
BSR Tolerance	NA		

- Replacement for CP4841XFS
- STS-tolerant and able to move east to west
- Strong standability, SDS and FELS tolerance

NEW**CROPLAN CP4944XFS**

Group: 4.9

**Characteristics**

	Not Recommended	Excellent
PRR Tolerance	2	
SDS Tolerance	2	
Frogeye Leaf spot	3	
Southern Stem Canker		1
Root-Knot Nematode	3	

Height	T	Canopy Type	Int/Bush
Emergence	1	Standability	2
BSR Tolerance	NA		

- Standalone variety with high yield potential
- Very strong performance poorly drained and clay soils
- Excellent stem canker tolerance; strong agronomics in PRR and SDS
- Acceptable Frogeye and Root Knot tolerance

CROPLAN CP4822ES

Group: 4.9

**Characteristics**

	Not Recommended	Excellent
PRR Tolerance	3	
SDS Tolerance	3	
Frogeye Leaf spot		2
Southern Stem Canker	N/A	
Root-Knot Nematode	N/A	

Height	MT	Canopy Type	Int/Bush
Emergence	2	Standability	2
BSR Tolerance	NA		

- STS®-tolerant excluder variety
- Broadly adapted east to west on most soil types including heavy clay soils
- Taller plant type with strong emergence and standability; excellent tolerance to Cercospora leaf spot
- Manage in areas with severe SDS and PRR

KEY**Scale**

1 = Excellent

2 = Strong

Give Mother Nature a Run for Its Money.

CROPLAN AA ALFALFA

Anthracnose and Aphanomyces root rot both represent a real threat to alfalfa growers. Our AA disease package helps grow a healthy crop even in field conditions susceptible to these pathogens.

Aphanomyces is an aggressive root disease that causes seedling stunting, reduced nodulation and poor root development. Multiple races can be present.

Anthracnose is a severe stem and crown disease that causes defoliation. Multiple races, including a new race 5, can be present in late season.

New CROPLAN® varieties with the designation AA in the name include an enhanced multi-pathogen disease package that offers:

- Disease resistance to multiple races of both Aphanomyces root rot and Anthracnose.
- A combination of healthy roots and healthy stems, which can lead to higher alfalfa yield and forage quality potential.
- Extensive alfalfa roots, to help gather water and nutrients below ground.
- Improved crown and stem health, serving as a highway to transport plant energy to and from the roots and leaves to make valuable forage above ground.

THE TRAITS YOU NEED

HARVXTRA® ALFALFA WITH ROUNDUP READY® TECHNOLOGY

This is the alfalfa trait package you've been looking for with plenty of options, including:

- Flexibility: a cutting window you get to control. Harvest at 28 days, or delay if weather slows you down without compromising quality potential.
- Quality: higher RFQ¹ and NDFd¹ than conventional varieties cut on the same day.
- Yield Potential: lengthen your cutting window up to 10 days with up to 20% higher yield at harvest.²
- Plus the benefits of Roundup Ready® Alfalfa technology.

ROUNDUP READY® ALFALFA

- Offers application flexibility for better weed control during stand establishment.
- Can lead to higher yield potential over the life of the stand.
- Can achieve the high-quality hay and haylage potential you need.

CONVENTIONAL ALFALFA

- Conventional breeding techniques that provide strong advancements in yield production, stand persistence, plus insect and disease resistance.
- Three decades of breeding techniques by alfalfa breeders for improved fiber digestibility (e.g., LegenDairy and RR Presteez lines).
 - These varieties have shown an incremental improvement in fiber digestibility when compared to non-selected varieties.

ALFALFA FOR ORGANIC FORAGE PRODUCTION

- Products developed through conventional breeding, as opposed to the result of genetic engineering.*
- These conventional varieties include the Apex™ Green OMRI Listed® seed coating package.
 - Optimizes water absorption by using natural micronutrients and nitrogen-fixing rhizobia in an organic hydration coating.

COATED SEED

Ensure you're enabling seedling health and seedling germination with WinField® United's seed treatment and coating Grozone® Force package, which delivers:

- Rhizobium bacteria to fix nitrogen
- Fungicides for multiple modes of action to help protect seedlings from root diseases such as phytophthora, Pythium and Aphanomyces
- A micronutrient package, including a PGR to promote early seedling growth

1. Data from FGI trials comparing HarvXtra® Alfalfa with Roundup Ready® Technology 2017 FD4 commercial varieties to FD4 commercial checks. Trials were seeded in 2013 and harvested 2014-2016 at five locations across the U.S. Yield increase is directly correlated to the ability to delay harvest.

2. Data from an FGI trial in West Salem, Wis., comparing three cuttings at 35-day intervals to four cuttings at 28-day intervals. Trials were seeded in 2013 and harvested in 2014-2016. Yield increase is directly correlated to the ability to delay harvest.

**WinField® United does not guarantee forage harvested from stands established with this seed will be GMO-free. Check with your local organic certifying organization before planting.*

The CROPLAN AA disease package was developed by FGI and is also marketed under the UltraCut™ alfalfa disease package brand.

HVX Tundra II

Regions: East|North|West
Fall Dormancy: 3.3
Winterhardiness: 1.2

Characteristics

	Not Recommended			Excellent		
Yield Index					2	
Persistence Index						1
Feed Quality*						1
Disease Resistance				3		
Insect Resistance		4				
Nematode Resistance			3			

*Feed quality ratings for HarvXtra® Alfalfa are represented on a separate scale than Roundup Ready® and conventional alfalfa varieties and are signified with an "H". Because there is a significant improvement in Forage quality, HarvXtra Alfalfa products can only be compared to other HarvXtra Alfalfa products.

- H1 feed quality rating; highest forage quality potential in our lineup, on average, 24% higher NDFD than Roundup Ready® check varieties
- Ideal for Northern growing regions or high elevation; good disease and pest package for east to west adaptation
- Versatile harvest options: ideal for a 2- to 3-cut baled hay management system or great for a 1- or 2-cut hay harvest followed by grazing

HVX Driver

CROPLAN Graze N Hay 3.10RR

Regions: North|West
 Fall Dormancy: 2.9
 Winterhardness: 1.8

Characteristics

	Not Recommended	Excellent
Yield Index	3	
Persistence Index		1
Feed Quality	3	
Disease Resistance	3	
Insect Resistance	4	
Nematode Resistance	5	

- Best-suited for Northern regions; exceptional winterhardness and stand persistence
- Withstands hoof or wheel traffic; weed control with the Roundup Ready® trait improves stand establishment on dryland acres or in limited water conditions
- Excellent variety where 1 or 2 cuttings of hay will be harvested mechanically followed by grazing

CROPLAN RR Presteez

Regions: Central|East|North|West
 Fall Dormancy: 3.2
 Winterhardness: 1.2

Characteristics

	Not Recommended	Excellent
Yield Index	2	
Persistence Index		1
Feed Quality		1
Disease Resistance	3	
Insect Resistance	2	
Nematode Resistance	4	

- High forage quality potential ideal for baled hay or haylage harvest
- Excellent salt-tolerance ratings in germination tests and exceptional performance in stand persistence trials
- Ideal for Upper Midwest and West as a 3- to 4-cut baled hay and/or haylage harvest system

CROPLAN RR Vamoose

Regions: Central|East|North
 Fall Dormancy: 3.9
 Winterhardness: 1.8

Characteristics

	Not Recommended	Excellent
Yield Index	3	
Persistence Index		1
Feed Quality	3	
Disease Resistance	3	
Insect Resistance	3	
Nematode Resistance	4	

- Performs well in the Upper Midwest and East where high resistance to potato leafhopper (PLH) may be necessary
- PLH resistance provides improved yield potential, high-quality feed and stand persistence
- Outstanding agronomics; PLH resistance offers reduced-spray or no-spray options; best-suited in a 3- to 4-cut system

NEW

CROPLAN RR AphaTron AA

Regions: Central|East|North|West
 Fall Dormancy: 4.4
 Winterhardness: 1.4

Characteristics

	Not Recommended	Excellent
Yield Index		1
Persistence Index		1
Feed Quality	2	
Disease Resistance		1
Insect Resistance	3	
Nematode Resistance	N/A	

- The newest variety with the AA disease resistance package; exceptional root and plant health to support high yield potential
- Highest resistance (HR+) rating to Aphanomyces Root Rot Enhanced Multi-Race; HR+ to multi-race anthracnose disease (including race 5)
- Provides exceptional yield and forage quality potential under a 4- to 5-cut haylage or aggressive hay management system

CROPLAN RR AphaTron 2XT

Regions: Central|East|North|West
 Fall Dormancy: 4
 Winterhardness: 1.5

Characteristics

	Not Recommended	Excellent
Yield Index	2	
Persistence Index		1
Feed Quality	2	
Disease Resistance	3	
Insect Resistance	3	
Nematode Resistance	3	

- Great soil disease resistance to help improve root and plant health
- High resistance (HR) to Aphanomyces root rot disease races 1 and 2; resistant (R) to Enhanced Multi-Race
- Provides high yield potential and good forage quality potential under a 4-cut haylage or aggressive hay management system

CROPLAN RR Stratica

Regions: Central|East|North|West
 Fall Dormancy: 4.3
 Winterhardness: 2

Characteristics

	Not Recommended	Excellent
Yield Index	2	
Persistence Index	2	
Feed Quality	3	
Disease Resistance	3	
Insect Resistance	2	
Nematode Resistance	3	

- Exceptional ability to perform well across multiple geographies and growing conditions
- Features a good disease-resistance package for soils east to west
- High forage yield potential, fast regrowth and good winterhardness; ideally suited for a 4-cut haylage or aggressive hay management system

KEY Scale
 1 = Excellent
 2 = Strong
 3 = Acceptable

- Developed for the western areas of the U.S. where problematic soils, including high-salinity soils, can reduce alfalfa production
- Great performance in field trials heavily infested with nematodes; high resistance to both stem and northern root-knot nematodes
- Exceptional yield potential with optimum production under 5- to optional 6-cut haylage or baled hay harvest systems
- Available with Apex™ Green Seed Coating; OMRI Listed® for organic use

CROPLAN Artesian Sun 6.3

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

Feed quality ratings for HarvXtra® Alfalfa are represented on a separate scale than Roundup Ready® and conventional alfalfa varieties and are signified with an "H." Because there is a significant improvement in forage quality, HarvXtra® Alfalfa products can only be compared to other HarvXtra® Alfalfa products.

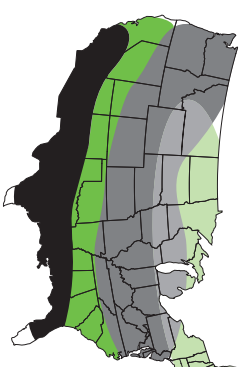

ALFALFA VARIETY PLACEMENT¹

The map can be used to determine which alfalfa varieties are recommended for your area's climate challenges. Also, use the chart below to place the recommended variety to help manage common diseases and pests in your area, and to match quality to your desired cutting frequency.

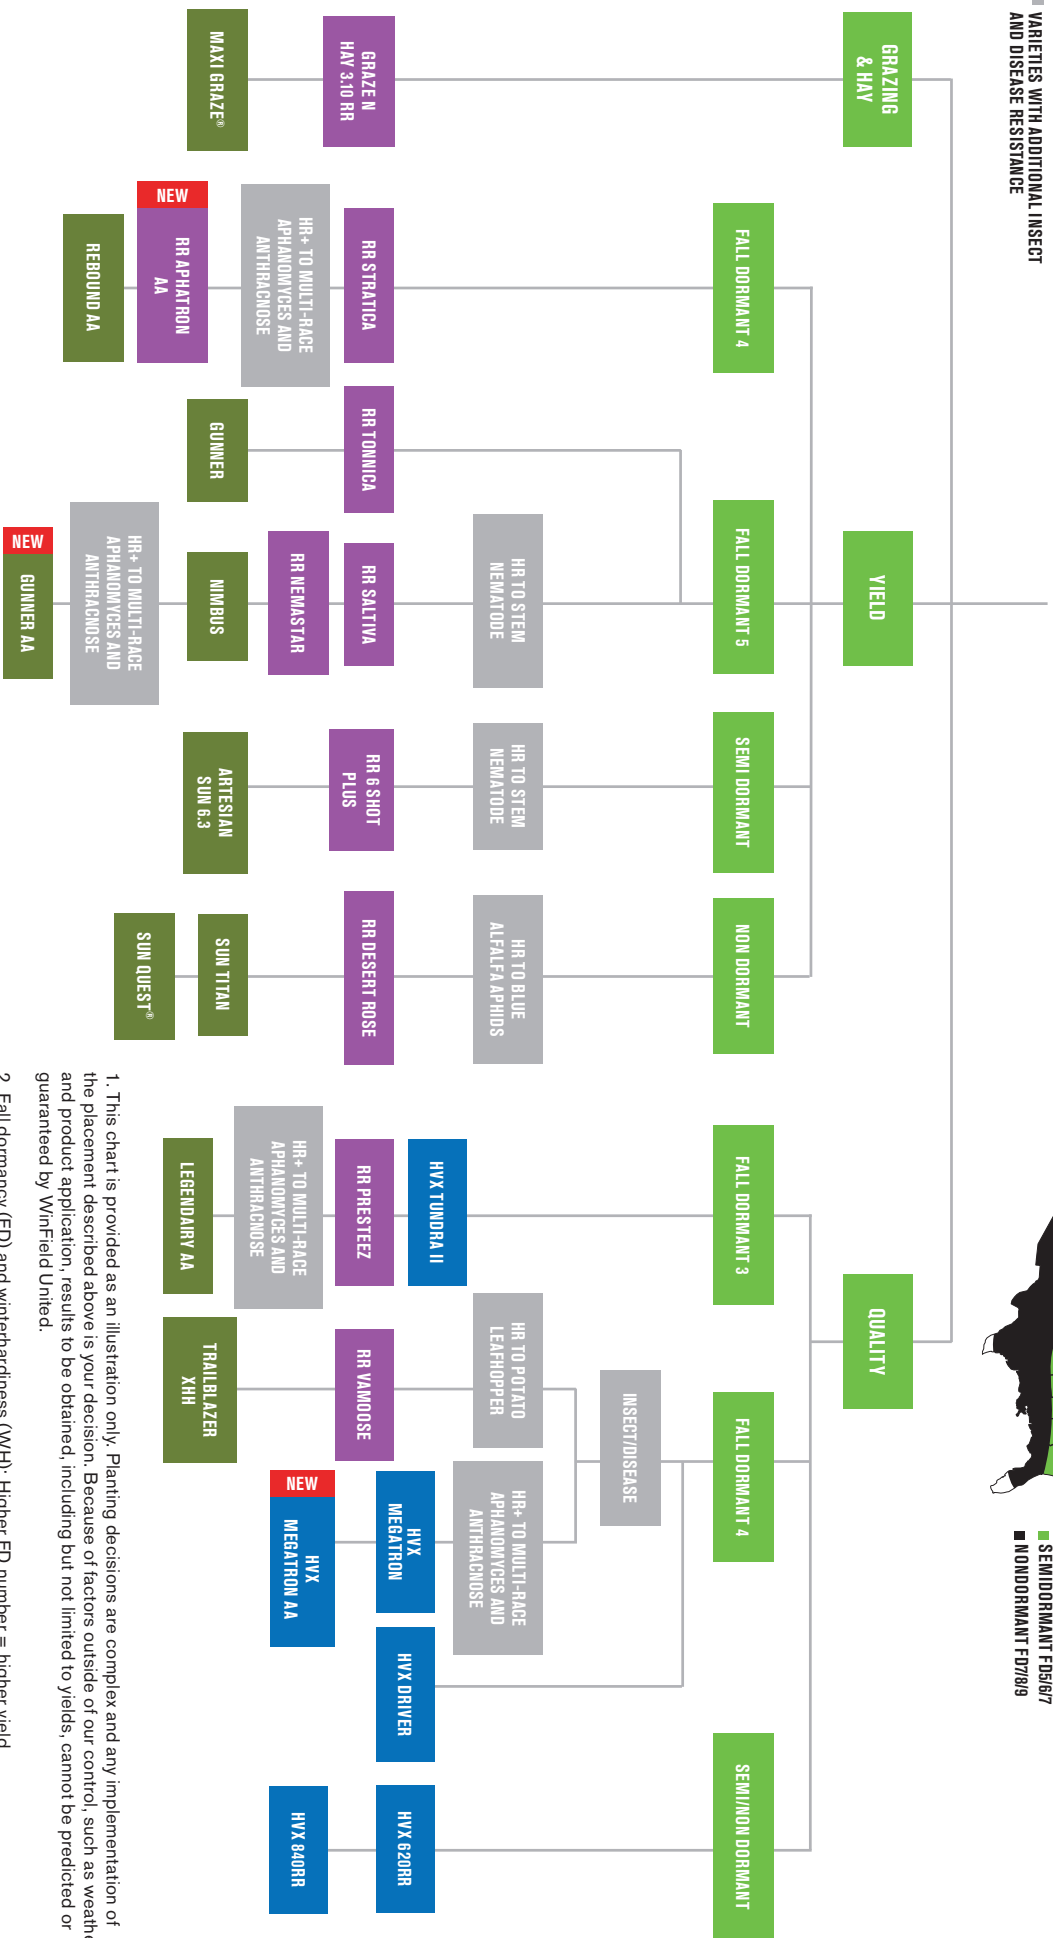

PRODUCT DORMANCY MAP²

Fall dormancy and winterhardness are important considerations in alfalfa seed selection. This map shows CROPLAN[®] seed varieties that match fall dormancy and winterhardness zones in various regions of the United States.

- WINTERHARDY FD2/3
- WINTERHARDY FD3/4
- WINTERHARDY FD4/5
- SEMIDORMANT FD5/6/7
- NONDORMANT FD7/8/9

- HARVYTRA[®] ALFALFA VARIETIES
- ROUNDUP READY[®] VARIETIES
- CONVENTIONAL VARIETIES
- VARIETIES WITH ADDITIONAL INSECT AND DISEASE RESISTANCE

1. This chart is provided as an illustration only. Planting decisions are complex and any implementation of the placement described above is your decision. Because of factors outside of our control, such as weather and product application, results to be obtained, including but not limited to yields, cannot be predicted or guaranteed by WinField United.

2. Fall dormancy (FD) and winterhardness (WH): Higher FD number = higher yield potential; lower WH number = more cold tolerant and stand persistent.

- 5 = Not Recommended

1 Feed Quality Index

Feed quality ratings for HarvXtra® Alfalfa are represented on a separate scale than Roundup Ready® and conventional alfalfa varieties and are signified with an "H." Because there is a significant improvement in forage quality, HarvXtra® Alfalfa products can only be compared to other HarvXtra® Alfalfa products.

2 Salt Tolerance

6 = Variety tolerance for germination under high saline conditions in a petri dish
 F = Variety tolerance for forage growth under high saline conditions as a potted plant in the greenhouse

Resistance Ratings

- S = Susceptible (0–5%)
- LR = Low Resistance (6–14%)
- MR = Moderate Resistance (15–30%)
- R = Resistance (31–51%)
- HR = High Resistance (>50%)
- HR+ = Highest Resistance available on the market (>50%)

Note: Field tests are currently being used to select and validate true salt-tolerant varieties. Many soils that are high in salinity also have other problematic conditions. Therefore, germination and forage salt-tolerant ratings may not predict field performance.

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CORN SILAGE

Introducing Our “New Math”: High Quality x High Tonnage = Stellar Yield Potential.

SELECT HYBRIDS FOR QUALITY AND TONNAGE

When selecting a corn silage hybrid, two considerations should rise to the top: quality to achieve milk/ton and tonnage for yield. In replicated Answer Plot® trials, we test CROPLAN® corn silage hybrids for both nutrient requirements and agronomic factors. Look for the CROPLAN hybrids with the Data Proven icon. It represents the designation of high quality and high tonnage, consistently performing to deliver high quality and high tonnage potential.

Your nutritionist can determine the parameters for nutrient needs, and your WinField United representative can use Answer Plot® data to help position each hybrid for optimal performance based on multiple variables.

WHEN PERFORMANCE IS ON THE LINE, THINK SILAGEFIRST® HYBRIDS

CROPLAN seed has three types of hybrids, specifically designed for high-producing dairy and beef cattle:

LEAFY HYBRIDS

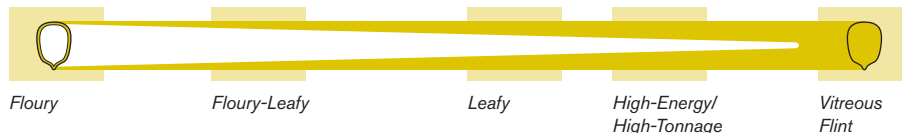

- Leafy stalks are thicker and more digestible, with larger ears to produce more energy.

FLOURY-LEAFY HYBRIDS

- At feed out, these products effectively bridge the gap between the previous year’s corn silage pile and the current year’s feed.
- May not contain a high level of total starch but have a softer kernel texture that’s easily broken during the chopping, storage and chewing process, allowing starch to be readily digested for more available energy.

HIGH-ENERGY/HIGH-TONNAGE HYBRIDS

- More flexibility in harvest and feed out as grain or high-energy/high-tonnage silage when used in combination with leafy and floury-leafy hybrids.
- Appropriate for feeding after the 120-day post-ensiling period when reaching optimum starch and fiber digestibility.

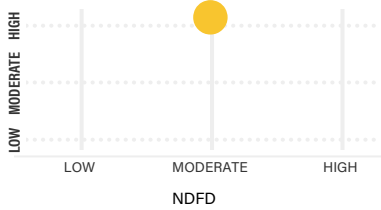

CROPLAN CP184RR

Relative Maturity: 80

Tonnage vs NDFD

Tonnage

- High tonnage potential in an early-maturing hybrid
- Tall aggressive-growing hybrid
- Large flex ear for wide adaptation to all soils and populations
- Manage for early harvest due to flinty type grain and average standability

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	3	
Root Strength	2	
Tonnage Potential	2	
Milk/Acre	3	
Starch	4	

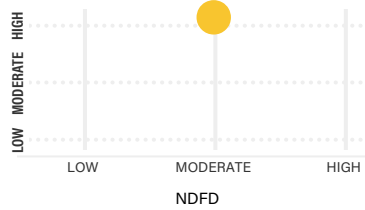

CROPLAN CP2692D

Relative Maturity: 86

Tonnage vs NDFD

Tonnage

- Duracade™ and Artesian® traits with CRW protection; handles variability and multiple soil types well
- Medium-tall plant with strong stalks; dual-purpose option
- Low response to population score, for good potential at lower plant densities

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	N/A	
Root Strength	1	
Tonnage Potential	1	
Milk/Acre	2	
Starch	3	

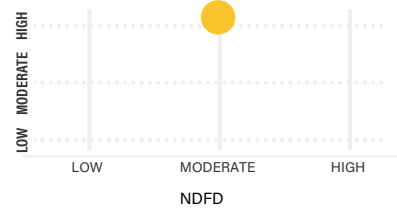

CROPLAN CP2790VT2P/RIB

Relative Maturity: 87

Tonnage vs NDFD

Tonnage

- High-tonnage potential with strong ear flex and drought tolerance
- Excellent seedling vigor for early planting
- Strong ear flex with a moderate response-to-nitrogen; can fit a broad range of growing conditions
- Manage for late-season stalks and Goss's wilt

Characteristics

	Not Recommended	Excellent
Seedling Vigor	1	
Drought Tolerance	1	
Root Strength	2	
Tonnage Potential	2	
Milk/Acre	3	
Starch	1	

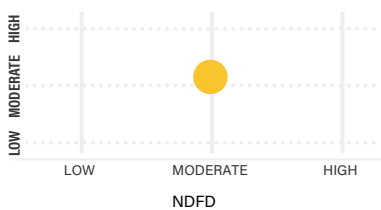

CROPLAN CP2845SS/RIB

[VT2P/RIB]*
Relative Maturity: 89

Tonnage vs NDFD

Tonnage

- High yield potential across all soil types and environments
- Plant early, great emergence in cooler soils; excellent conservation-till hybrid
- High response to nitrogen and population optimizes yield potential
- Manage placement for Goss's wilt

Characteristics

	Not Recommended	Excellent
Seedling Vigor	1	
Drought Tolerance	1	
Root Strength	1	
Tonnage Potential	3	
Milk/Acre	3	
Starch	2	

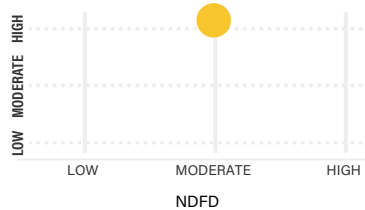

CROPLAN CP2965VT2P/RIB

[RR]
Relative Maturity: 89

Tonnage vs NDFD

Tonnage

- High yield potential to complement CP2845
- Excellent early vigor for early planting
- Moderate RTP and high RTN boost yield potential on average-to-productive soils
- Acceptable Goss's wilt tolerance

Characteristics

	Not Recommended	Excellent
Seedling Vigor	1	
Drought Tolerance	2	
Root Strength	2	
Tonnage Potential	2	
Milk/Acre	2	
Starch	3	

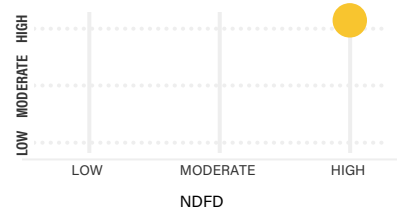

CROPLAN CP3200SRR

Relative Maturity: 93

Tonnage vs NDFD

Tonnage

- Flouxy x leafy silage-only hybrid with very high tonnage potential
- Tall plant with large flex ears that contribute to above average starch
- Highly responsive to nitrogen and fungicide applications
- Best positioned at lower seeding rates to maximize tonnage and agronomics

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	2

CROPLAN[®] corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot[®] trials.

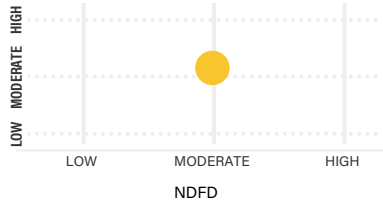

CROPLAN CP4880SS/RIB

Relative Maturity: 108

Tonnage vs NDFD

Tonnage

- Best performance on high yield potential and well drained soils
- SmartStax® hybrid with exceptional top end yield potential
- Strong stalks and roots
- High tonnage potential, despite being a medium-short statured hybrid

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	3	
Root Strength	2	
Tonnage Potential	3	
Milk/Acre	2	
Starch	2	

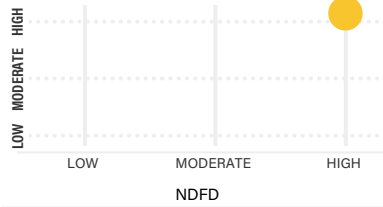

CROPLAN CP5073SS/RIB

[VT2P/RIB]*
Relative Maturity: 110

Tonnage vs NDFD

Tonnage

- Medium height dual-purpose hybrid with soft floury grain type
- Strong early plant vigor for reduced tillage and early planting
- Has nice flex for moderate densities; high response to nitrogen
- Utilize fungicide to enhance late-season health

Characteristics

	Not Recommended	Excellent
Seedling Vigor		1
Drought Tolerance	2	
Root Strength	2	
Tonnage Potential		1
Milk/Acre	2	
Starch	2	

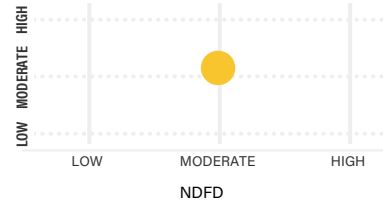

CROPLAN CP6110VT2P/RIB

Relative Maturity: 110

Tonnage vs NDFD

Tonnage

- Tough high-tonnage silage hybrid for lower-yielding environments
- Keep north of the 110-day zone as a full-season silage hybrid
- Great for irrigated ground; excels with fungicides

Characteristics

	Not Recommended	Excellent
Seedling Vigor		2
Drought Tolerance		1
Root Strength		1
Tonnage Potential	3	
Milk/Acre	3	
Starch		1

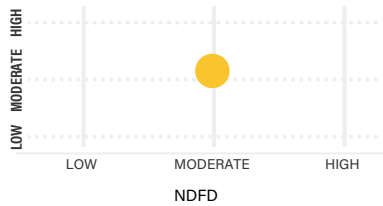

CROPLAN CP5115SS/RIB

[VT2P/RIB]*
Relative Maturity: 111

Tonnage vs NDFD

Tonnage

- Medium-tall, dual-purpose hybrid with high tonnage potential at higher seeding rates
- Excellent emergence, seedling vigor and roots
- Semi-flex ear; plant at moderate populations
- Use caution on Goss's wilt acres; keep in RM zone

Characteristics

	Not Recommended	Excellent
Seedling Vigor		1
Drought Tolerance		2
Root Strength		1
Tonnage Potential	3	
Milk/Acre	3	
Starch	2	

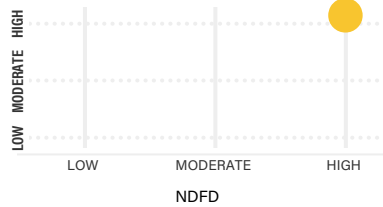

CROPLAN CP5244VT2P/RIB

Relative Maturity: 112

Tonnage vs NDFD

Tonnage

- High tonnage potential adapted for many soil types and yield levels
- Robust plant with strong heat and drought tolerance allow broad use of this high-starch dual-purpose hybrid
- Ear flex and stress tolerance drive performance in a wide range of populations and soil types
- Fungicide application increases staygreen and harvest flexibility

Characteristics

	Not Recommended	Excellent
Seedling Vigor	2	
Drought Tolerance	2	
Root Strength	2	
Tonnage Potential		1
Milk/Acre		1
Starch		1

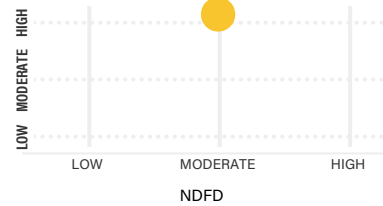

CROPLAN CP5370SS/RIB

[VT2P/RIB]*
Relative Maturity: 113

Tonnage vs NDFD

Tonnage

- Tall hybrid with very high tonnage potential and above average starch content
- Excellent stalks and roots
- Optimize yield potential with nitrogen management and plant densities
- Best positioned on rotated acres; ear tip back influenced by genetics

Characteristics

	Not Recommended	Excellent
Seedling Vigor		1
Drought Tolerance		2
Root Strength		1
Tonnage Potential	2	
Milk/Acre	2

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

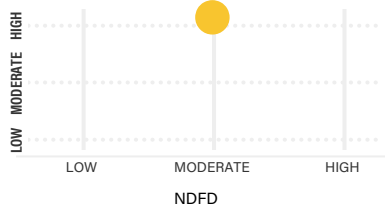

CROPLAN CP5550VT2P/RIB

Relative Maturity: 115

Tonnage vs NDFD

Tonnage

- Position in average to high-yield-potential acres; dual-purpose option
- Solid agronomic and disease package
- Semi-flex ear for moderate to moderately high planting densities
- Acceptable Goss's wilt tolerance

Characteristics

	Not Recommended		Excellent

CROPLAN CP5678VT2P/RIB

[SS/RIB]*
Relative Maturity: 116

Tonnage vs NDFD

Tonnage

- Medium-height hybrid with wide leaves and girthy stalk that contributes to solid tonnage potential
- Tough hybrid; good stress tolerance; has a semi-flex ear
- Full-season dual-purpose hybrid with great stalks and roots
- Excels with high nitrogen and fungicides, and medium-high populations

Characteristics

	Not Recommended		Excellent

CROPLAN CP5700SVT2P/RIB

Relative Maturity: 117

Tonnage vs NDFD

Tonnage

- Exceptionally high tonnage potential and digestibility
- Performs extremely well in the Midwest, Southeast, West and Pacific Northwest
- Takes heat and stress at a wide range of populations
- Needs high rates of nitrogen/manure for optimal yield potential; high response to fungicides

Characteristics

	Not Recommended		Excellent	
Seedling Vigor			2

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

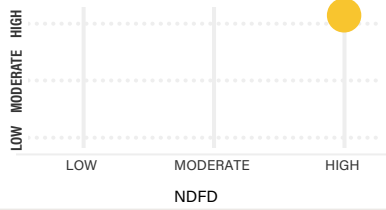

CP5900SVT2P/RIB

Relative Maturity: 119

Tonnage vs NDFD

Tonnage

- Tall silage hybrid with very high tonnage potential and above-average digestibility
- Strong heat tolerance; exceptional high pH soil tolerance
- Very good southern rust tolerance; good for corn-on-corn acres
- Decrease populations in heavy soils prone to flooding

Characteristics

FORAGE SORGHUM

The Potential for Big Yields and Big Results, Courtesy of Our Season-Long Plan.

SELECT THE RIGHT FORAGE TYPE FOR YOUR OPERATION

► **Forage Sorghum (single-cut silage)**

Tall plant that has a sweet stalk and small grain head with limited regrowth potential.

► **Sorghum x Sudan (multi-cut or grazing)**

Strong tillering and regrowth ability, ideal for multiple harvests with increased tonnage potential.

► **Pearl Millet (multi-cut or grazing)**

Brachytic plant stature with finer stalks and prolific tillering.

SELECT THE HYBRID WITH THE TRAIT YOU NEED

BROWN MIDRIB-6 TRAIT

- Excellent forage quality and agronomics.
- Nutritional value potential is comparable to corn silage.
- Trait available in the following forage types: forage sorghum, sorghum x sudan, pearl millet.

BRACHYTIC TRAIT

- Excellent standability and tillering.
- Shorter stature and high leaf-to-stem ratio due to reduced internode length.
- Trait available in the following forage types: forage sorghum, sorghum x sudan, pearl millet.

PHOTOPERIOD SENSITIVITY TRAIT

- Extended harvest window.
- Remains vegetative until day length falls below 12 hours and 20 minutes, then entering reproductive stage.
- Trait available in the following forage types: forage sorghum, sorghum x sudan.

SUGARCANE APHID (SCA)

- Use a tolerant hybrid to slow down the rate of infestation and seed treatment for early control.
- Plant as early as soil temperature allows. An earlier-maturity variety may help avoid late-season infestations.
- Scout early and often, while treating as soon as threshold is reached.
- Avoid use of pyrethroids and other insecticides that are harmful to beneficials (SCA natural enemies include lady beetles, hover fly and green lacewing). Insecticides may cause SCA numbers to increase rapidly.

HERBICIDE TOLERANCE

- igrowth is a new forage sorghum trait for hard to control grass and broadleaf weeds.

CROPLAN BMR 3211

Regions: Central|East|North|Double-crop
Maturity: Early

Characteristics

	Not Recommended	3	2	1	Excellent
Stress Tolerance			3		
Disease Tolerance				2	
Forage Quality					1
Dry Hay		4			
Silage					1
Grazing		4			

- Early-maturing forage sorghum hybrid with excellent yield potential; slightly better forage quality than 3212
- BMR-6 trait with excellent forage quality potential; great for lactating cows
- Strong disease resistance; moves well north and east; excellent option for double-cropping in the Central Plains regions
- Avoid overwatering and excessive populations; plants can reach 8 feet tall
- Recommended seeding rate: 60,000 to 70,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

NEW

CROPLAN BMR 3212

Regions: Central|East|North|Double-crop
Maturity: Early

Characteristics

	Not Recommended	3	2	1	Excellent
Stress Tolerance			3		
Disease Tolerance				2	
Forage Quality					1
Dry Hay		4			
Silage					1
Grazing		4			

- Early-maturing forage sorghum hybrid with excellent yield potential; potentially better standability over 3211
- BMR-6 trait with excellent forage quality potential; great for lactating cows
- Strong disease resistance; moves well north and east; excellent option for double-cropping in the Central Plains regions
- Avoid overwatering and excessive populations; plants can reach 8 feet tall
- Recommended seeding rate: 60,000 to 70,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

CROPLAN IQ 3501

Regions: Central|South|West
Maturity: Mid

Characteristics

	Not Recommended	2	1	Excellent
Stress Tolerance				2
Disease Tolerance				1
Forage Quality			2	
Dry Hay	5			
Silage				1
Grazing	5			

- New line of genetics; the IQ (improved quality) series is selected for higher forage quality potential than conventional hybrids
- Extremely flexible hybrid; excellent disease and drought tolerance allow for placement across most of the U.S.
- Excellent yield potential; similar to a late-season hybrid
- Excellent standability; plants can reach 7 to 8 feet tall; manage water and fertility for a mid-maturity hybrid; better on toughest dryland than 3506
- Recommended seeding rate: 50,000 to 60,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

CROPLAN 3506

Regions: Central|South|West
Maturity: Mid

Characteristics

	Not Recommended	2	1	Excellent
Stress Tolerance				2
Disease Tolerance				1
Forage Quality			2	
Dry Hay	5			
Silage				1
Grazing	5			

- Position where you will be needing systemic insecticide for early control of insects
- Extremely flexible hybrid; excellent disease and drought tolerance allow for placement across most of the U.S.
- Excellent yield potential; similar to a late-season hybrid
- Excellent standability; plants can reach 7 to 8 feet tall; manage water and fertility for a mid-maturity hybrid; better on irrigation than 3501
- Recommended seeding rate: 50,000 to 60,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

NEW

CROPLAN 3541 BMR Leafy AT

Regions: Central|South|West
Maturity: Mid

Characteristics

	Not Recommended	2	1	Excellent
Stress Tolerance				2
Disease Tolerance				1
Forage Quality				1
Dry Hay	5			
Silage				1
Grazing	5			

- Excellent forage quality of the BMR-6 gene paired with the brachytic dwarf trait for high leaf-to-stem ratio
- Extremely flexible hybrid; excellent disease and drought tolerance allow for placement across most of the U.S.
- Sugarcane aphid tolerance offers in-plant crop protection for areas that experience this pest regularly
- Combining the brachytic dwarf traits with excellent stalks, standability is excellent with a 6 to 7 foot plant height
- Recommended seeding rate: 60,000 to 100,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

CROPLAN 3681 AT

Regions: Central|South|West
Maturity: Mid/Late

Characteristics

	Not Recommended	2	1	Excellent
Stress Tolerance				2
Disease Tolerance				1
Forage Quality			3	
Dry Hay	5			
Silage				1
Grazing	5			

- Conventional hybrid with excellent tolerance to sugarcane aphid (SCA); SCA may be on plant in low numbers, plant handles stress well
- Extremely flexible hybrid; excellent disease and drought tolerance allow for placement across Central and Southern U.S.
- Very high leaf expression and great stalks deliver good yield potential
- Excellent standability; plants can reach 8 to 9 feet tall; manage water and fertility for a mid-maturity hybrid
- Recommended seeding rate: 60,000 to 70,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

- igrowth® herbicide tolerant variety to use with IMIFLEX™ herbicide system for excellent pre-emerge or post application
- Extremely flexible hybrid; excellent disease and drought tolerance allow for placement across most of the U.S.
- Late maturity variety with excellent combination of yield potential and quality requiring a full growing season
- Combines the brachytic dwarf traits with excellent stalks, standability is excellent with a 6 to 7 foot plant height
- Recommended seeding rate: 60,000 to 100,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

CROPLAN Greentreat® 1531Regions: Central|East|North|South|West

Forage Quality						1
Dry Hay						1
Silage						
Grazing						1

- Excellent forage quality of the BMR-6 gene paired with the brachytic dwarf trait for lower cutting height and high leaf-to-stem ratio
- A best-in-class variety for drought tolerance and heat stress; strong disease package for humid areas and those at risk for anthracnose
- Dry stalk (~5% less) paired with fine stems allows for easier transition into dry hay use
- Requires proper harvest management or forage quality may be compromised (40 days or 40 inches); harvest prior to 50 days before head is initiated
- Recommended seeding rate: 20 to 25 pounds per acre at 1 inch (by drill is recommended)

NEW**CROPLAN Dynamo II**Regions: Central|East|North|South|West

Silage			3			
Grazing						1

- Brachytic dwarf provides great forage quality when combined with the BMR-6 gene
- Delayed flowering/head emergence allows for very flexible cutting schedules
- Extended cutting window ideal for all forage systems, fast growing and quick recovery after cutting
- Harvest at 40 days or 40 inches, whichever comes first; for grazing, start when plants reach 18 to 24 inches, remove animals when two nodes are left aboveground
- Recommended seeding rate: 20 to 25 pounds per acre at a depth of 1 inch (by drill is recommended)

Dry Hay						2
Silage						2
Grazing						2

- High yield potential product with the BMR trait for excellent warm-season accumulation of highly digestible fiber
- Photoperiod sensitive trait allows the plant to remain in the vegetative state with a minimum of 12 hours and 20 minutes of daily sunlight; then head formation starts
- Excellent disease tolerance; strong drought and heat tolerance; moves well east to west and north to south
- Versatile product for grazing, baled hay or silage with excellent regrowth; easier to dry when cut at 40 days or 40 inches
- Recommended seeding rate: 20 to 25 pounds per acre at a depth of 1 inch (by drill is recommended)

GRAIN SORGHUM

Genetics So Tough, You Wouldn't Want to Meet Them in a Back Alley.

SELECT THE HYBRID WITH THE TRAIT YOU NEED

CROPLAN® grain sorghum products offer traits that have made great progress in protecting plants from insect damage and reducing competition from weeds.

SUGARCANE APHID TOLERANCE (SCA)

- Use a tolerant hybrid to slow down the rate of infestation. Plant as early as soil temperature allows. And while many commercially available products have high levels of sugarcane aphid tolerance, an earlier-maturity variety may help avoid late-season infestation in areas of high concern.
- Scout early and often. And use approved Sugarcane Aphid approved insecticide as soon as threshold is reached.
- Insecticides may cause SCA numbers to increase rapidly. Make sure to avoid using pyrethroids and other insecticides that are harmful to beneficials (SCA natural enemies include lady beetles, hover fly and green lacewing).

POST EMERGENT APPLICATION

Multiple product options are accessible for over-the-top application for weed control. For example, igrowth® and DT Trait® herbicide tolerant hybrids are now available for use for over-the-top application of IMIFLEX® and FirstAct® Herbicide, respectively, for select grass and broadleaf weed control.

SPRING CANOLA

Delivering Yield Potential Like It's Our Job (Because It Is).

THE RIGHT GENETICS AND TRAITS FOR YOUR ACRES

- ▶ CROPLAN® seed brings genetic diversity to the farm with the latest weed-control options such as the LibertyLink® canola system and TruFlex® canola, which offers outstanding crop safety.

LUMIDERM® INSECTICIDE SEED TREATMENT

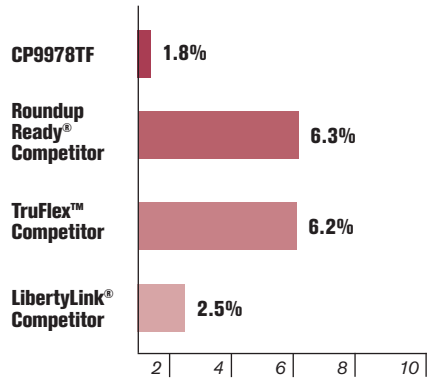

An industry leading technology responsible for:

- Improved control of flea beetle and cutworm.
- Providing crops with increased stand establishment, plant vigor and biomass.

CROPLAN SEED DELIVERS EXCELLENT SHATTER SCORE¹

- ▶ CROPLAN® TruFlex® canola (CP9978TF) showed a lower shatter score than competitive checks in a recent study from Roseau, MN.

% OF LOSS TO SHATTER

Variety Trial.

Northern Resources, Roseau, Minn.

1. Results not statistically significant and may vary. Because of factors outside of WinField United's control, such as weather, product application and any other factors, results to be obtained, including but not limited to yields, financial performance or profits, cannot be predicted or guaranteed by WinField United.

SC designates these products have met the minimum requirements for standability and reduced shatter to be considered a straight-cut hybrid.

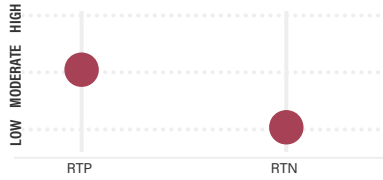

SC+ indicates a hybrid has met the highest level of requirements for optimum straight-cut performance.

WINTER CANOLA

High Potential Canola Crops are Our Business. And Business is Good.

USE CUTTING-EDGE WEED CONTROL

CROPLAN® seed offers the latest herbicide management systems with excellent crop safety ratings to give your canola a clean chance at success.

ROUNDUP READY® WINTER CANOLA

- Strong on cheat, feral rye and other tough grasses.
- Optimal control with Class Act® NG® and InterLock® adjuvants.
- Excellent crop safety with Roundup® brand agricultural herbicide for in-crop applications.

ROUNDUP READY® WINTER CANOLA WITH SURT

- Review the crop protection history of previous wheat crops.
- Improved crop safety from previous wheat crops with a long-residual sulfonylurea herbicide.
- Susceptibility to many broadleaf herbicides with a long residual life.

NEW CANOLA ROTATIONAL OPPORTUNITY

Group 2 Flexible (G2Flex®) residual tolerance technology allows canola to be planted right behind wheat in soils with Group 2 herbicide residuals, including imidazolinones, sulfonylureas, sulfonamides and triazolopyrimidines.

WinField® United is the exclusive provider of the only canola variety with the G2Flex® trait — CROPLAN® CP1022WC winter canola.

G2FLEX

PLANTING FOR WINTERHARDINESS

- Canola should be planted six weeks before the first killing frost date for the area (less than 25° F).
- Seeding date is important to establishing a crop that has sufficient growth for good winterhardiness.
- Planting into a clean seedbed free of crop residue allows for better winterhardiness.
- Crop residue can elevate plant crowns and expose them to more temperature fluctuations and winterkill.

CROPLAN CP115WRR

Winter Canola

**Characteristics**

	Not Recommended			Excellent	
Lodging				2	
Oil Content				2	
Drought Tolerance					1
Winter Hardiness				2	

- Strong yield potential and excellent stress tolerance for multiple environments
- SURT (sulfonylurea residual tolerant)
- Dependable variety; approved for first-time High Plains canola growers
- Handles low-pH soil better than other products

CROPLAN CP225WRR

Winter Canola

SUNFLOWER

Decades of Sunflower Insights Have Led to This Moment.

CROPLAN® hybrids bring you some of the industry's leading technologies to elevate your sunflower game.

FORTENZA® INSECTICIDE SEED TREATMENT

An industry leading technology, that's been added to our seed treatment offering is responsible for:

- Improved control of cutworm.
- Providing crops with increased stand establishment, plant vigor and biomass.

PROSUN™ PRECISE SEED COATING

Prosun™ precise seed coating is available on select CROPLAN sunflower hybrids and offers:

- Consistent seed size, which helps optimize yield potential.
- Uniformity in stand establishment.
- Even growth for optimal weed, disease and insect management.

NEW SUNFLOWER PRODUCT LINE

CROPLAN seed has brought short statured, ultra-early sunflower hybrids that bring double crop opportunities to wider geographies, offering:

- In-season opportunities for pest management using your own ground equipment
- Wider window for planting or replant

TRAIT OPTIONS FOR THE WEED CONTROL YOU NEED

We offer farmers the ExpressSun® and the Clearfield® Production System traits, both of which provide good weed-control options to farmers.

BEYOND® AND EXPRESS® HERBICIDES

- Require preemergence herbicide treatments (Spartan® Charge, BroadAxe® or Prowl® H20) or preplant-incorporated herbicides (Framework®, Prowl® H20 or Sonalan®) to combat kochia and Russian thistle.
- Group 2 herbicide mode of action: ExpressSun® trait is tolerant to Express® herbicide and Clearfield® Production System is tolerant to Beyond® herbicide.

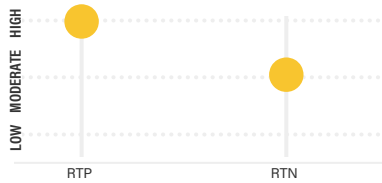

CROPLAN

CROPLAN CP432E

ExpressSun® Sunflower

Response Scores

Characteristics

	Not Recommended	Excellent
Stalk Quality	2	2
Root Strength	3	
Phomopsis		2
Oil Content	4	
Dry down		1

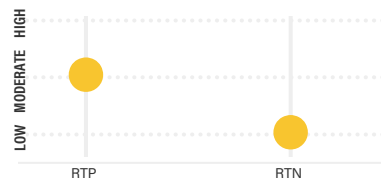

- High yield potential for early maturity
- Shorter plant height; very uniform
- DMR PI 8; resistant to all common U.S. races of downy mildew
- Utilize higher populations if pushing yield goals higher; has also shown yield response to higher available nitrogen

CROPLAN CP450E

ExpressSun® Sunflower

Response Scores

Characteristics

	Not Recommended	Excellent
Stalk Quality		1
Root Strength		1
Phomopsis		2
Oil Content	4	
Dry down		2

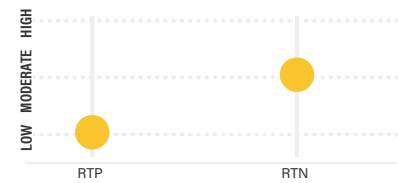

- Excellent yield potential; great defensive complement to CP455E
- Top performer in stressed environments
- Stronger standability than CP455E; good hybrid to plant early
- Good drought stress tolerance and low demand for additional nitrogen to maintain yield potential

CROPLAN CP455E

ExpressSun® Sunflower

Response Scores

Characteristics

	Not Recommended	Excellent
Stalk Quality		2
Root Strength	3	
Phomopsis	3	
Oil Content	3	
Dry down		1

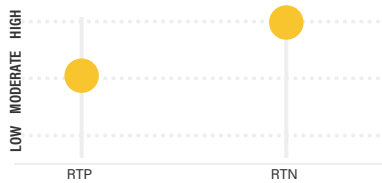

- Excellent yield potential; top performer in CROPLAN® lineup
- Widely adapted across regions and field conditions
- Medium-short plant with excellent drydown
- Good drought response along with sclerotinia tolerance for higher-moisture years

CROPLAN CP4909E

ExpressSun® Sunflower

Response Scores

Characteristics

	Not Recommended	Excellent
Stalk Quality		2
Root Strength		2
Phomopsis	3	
Oil Content	3	
Dry down		1

- Top-end yield potential in high-yield environments; use caution on droughty soils
- Great stalk and root strength
- Short stature for excellent standability
- High yield response to increased populations and nitrogen

CROPLAN CP5220CLSS

Clearfield® Sunflower

Response Scores - NA

Characteristics

	Not Recommended	Excellent
Stalk Quality		1
Root Strength		1
Phomopsis		1
Oil Content	4	
Dry down		1

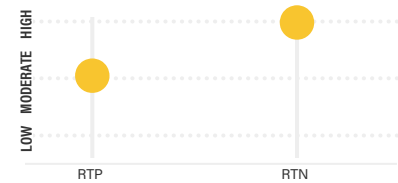

- Very early, extremely short-statured hybrid
- Excellent stalks, roots and late season standability
- Ultra-early hybrid with DMR for the high oleic crush/birdseed market
- Excellent option for late-planting or double-crop acres with in-season ground applications possible

CROPLAN CP5045CL

Clearfield® Sunflower

Response Scores

Characteristics

	Not Recommended	Excellent
Stalk Quality		1
Root Strength		1
Phomopsis	3	
Oil Content	2	
Dry down	3	

- Very high yield potential with excellent agronomics
- PI 6 and PI 17 DMR for one of the industry's leading downy mildew tolerance
- Excellent stalks and roots; medium plant height for excellent late-season standability
- Increased staygreen and slower drydown in cooler environments - a good candidate for desiccation

1 Market Options

Gain not guaranteed to be sold in your area. Due to factors outside our control, WinField United does not guarantee oleic levels. TBD = still in testing.

2 Downy Mildew Resistance

PI 2 gene = This gene is resistant to some of the early races of downy mildew, but it is susceptible to most of the common races found today.
PI 6 gene = This gene is resistant to races prevalent before 2009; it is susceptible to races 314, 704, 714, 734 and 774.

PI 8 gene = This gene can get infected, but then stops downy mildew from advancing or having an economic impact on all common races.
PI 15 gene = This gene is exclusive to CROPLAN® hybrids and is resistant to all known races of downy mildew.

PI P gene = Proprietary gene developed to control all known races of downy mildew.
PI 17 gene = Advanced control, resistant to all known races of downy mildew.

HARD RED SPRING WHEAT

We Predict High Performance Potential and Strong Wheat Crops in Your Future.

Optimize Seed ROI

To achieve farm topping yield potential, you need to do many things right. And that starts with CROPLAN® varieties.

This is seed that puts you on the path to maximizing ROI potential on each acre, beginning with exceptionally high performing genetics, which carry the latest traits. But even bigger advantages come with the data and intelligence we build on top of these revolutionary wheat varieties.

NEW ANSWER PLOT® RESEARCH PROVIDES NITROGEN AND POPULATION RESPONSE DATA FOR CROPLAN WHEAT VARIETIES.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 25.5bu/A average yield response advantage¹ when varieties are managed according to their Response to Nitrogen (RTN).
- Then, there's a 10.9bu/A average yield response advantage¹ when varieties are managed according to their Response to Population (RTP).

EACH VARIETY IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every product into the same environment won't maximize your ROI. Instead, give each variety what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

And on top of all that, you also get sawfly protection with our new semi-solid stemmed products that show excellent control of sawfly damage.

Only CROPLAN provides this level of intelligence. And you can only find CROPLAN varieties at the best retailers in America.

REVOLUTIONARY GRASSY WEED CONTROL

CROPLAN seed is pleased to offer the CoAXium Wheat Production System as a part of our wheat lineup. Created in part by wheat farmers for wheat farmers, this system provides cost-effective, excellent control of annual and perennial grasses, higher quality grain, and increased yield potential.

Additionally, it combines elite wheat varieties, the AXigen® trait and Aggressor® herbicide with an industry-wide stewardship program. AXigen® is an ACCase herbicide-tolerant trait that protects wheat varieties from Aggressor® herbicide, which delivers effective, consistent, broad-spectrum control of problem grasses.

When used in conjunction with CoAXium® varieties, Aggressor® herbicide provides systemic and selective broad-spectrum control of these problem grasses:

- Barnyard grass
- Bromus species, including ALS-resistant biotypes
- Feral and cereal rye
- Jointed goat grass, including ALS-resistant biotypes
- Wild oats (non-resistant Group1)
- Volunteer cereals

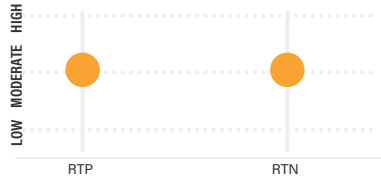

1. 2019 Answer Plot® trial data.

CROPLAN CP3530

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability	4	
Bacterial Leaf Streak		2
Test Weight		2
Protein		2

- Excellent yield potential and strong protein
- Very stable product across environments
- Good fusarium head blight with strong stem rust and BLS; good leaf rust tolerance
- Good standability with moderate populations, higher yield potential when populations are increased in environments with lower lodging risk

CROPLAN CP3915

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability		1
Bacterial Leaf Streak		1
Test Weight		1
Protein		2

- High yield and protein potential that can increase with additional nitrogen
- Excellent agronomics, very good BLS tolerance and straw strength
- Excels under higher yield environments; stable in lower yielding environments
- High response to population, recommended 1.4-1.7M seeds/Ac

CROPLAN CP3099A

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability		2
Bacterial Leaf Streak	4	
Test Weight		3
Protein	5	

- Extremely high yield potential with unique genetics in the industry
- Large biomass and an awnless head provide excellent forage potential, good tonnage and very good quality
- Lower protein, but additional nitrogen may increase both yield and protein potential
- Research showed increases in yield with higher populations; good standability in most environments

CROPLAN CP3119A

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability		2
Bacterial Leaf Streak	4	
Test Weight	4	
Protein	4	

- High-yielding European style genetics brings an awnless product with incredible biomass and very high yield potential
- Semi-solid stem for WSS tolerance combined with stress tolerance and lower response to inputs makes this a great Western-style wheat
- High yield potential; lower-protein can be improved with N management
- Extended-season wheat with longer grain-fill gives higher yield potential

CROPLAN CP3201AX

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability		1
Bacterial Leaf Streak		2
Test Weight	3	
Protein		2

- Can control resistant weeds by utilizing CoAXium® technology driven by Aggressor® herbicide using an ACCase inhibitor
- Nicely balanced product for both yield and protein potential, for success across markets
- Good agronomics and yield potential, especially in moderate to higher yielding environments
- Low demand for additional populations, but responds well to higher nitrogen availability

CROPLAN CP3360AX

Hard Red Spring

Response Scores - NA

Characteristics

	Not Recommended	Excellent
Standability		1
Bacterial Leaf Streak		3
Test Weight		1
Protein		3

- Control resistant weeds by utilizing CoAXium® technology driven by Aggressor® herbicide using an ACCase inhibitor
- Nicely balanced product for yield and protein potential, to enable success across markets
- Good agronomics and good yield potential, especially in moderate to higher yielding environments
- Medium-late maturity with earlier flowering and longer grain fill; medium plant height

CROPLAN CP3188

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability	3	
Bacterial Leaf Streak	4	
Test Weight	3	
Protein	3	

- Excellent performance under stressed conditions, but top-end yield potential on the most productive acres
- Low RTN and lower RTP gives a steady performance across acres, responds to additional nitrogen for more yield and protein potential
- Lower but acceptable protein, with total protein/Ac being higher than average
- FHB tolerance is above average, fungicide is recommended; manage for BLS

NEW

CROPLAN CP3055

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability	4	
Bacterial Leaf Streak		2
Test Weight	4	
Protein	4	

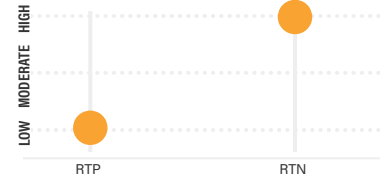

- High yield potential European-style genetics with a solid disease package
- Semi-solid stem variety for saw-fly tolerance; good stress tolerance for a great western fit
- Very large plant type and full-season maturity allows for very high yield potential
- Moderate yield response to nitrogen; as a full season product there is opportunity for split-applied nitrogen; additional nitrogen increases protein %

NEW

CROPLAN CP3322

Hard Red Spring

Response Scores

Characteristics

	Not Recommended	Excellent
Standability		2
Bacterial Leaf Streak		3
Test Weight		3
Protein		3

- Broadly adapted top-end yield potential product with excellent drought stress, average protein content and semi-solid stem for saw-fly tolerance
- Taller plant holds height, creates a thicker canopy for strong western performance with good straw strength for the east
- Performs well in lower-yielding environments without sacrificing top-end yield potential
- Medium-late flowering/maturity; average BLS; use fungicide for FHB control

- T = Tall

The comparison ratings are with CROPLAN® wheats only. These ratings reflect trends observed in research trials, which will change based on various factors, including variations in rainfall, temperature and production patterns.

HARD RED WINTER WHEAT

Optimize Seed ROI

To achieve farm topping yield potential, you need to do many things right. And that starts with CROPLAN® varieties.

This is seed that puts you on the path to maximizing ROI on each acre, beginning with exceptionally high performing genetics, which carry the latest traits. But even bigger advantages come with the data and intelligence we build on top of these revolutionary wheat varieties.

NEW ANSWER PLOT® RESEARCH PROVIDES NITROGEN AND FUNGICIDE RESPONSE DATA FOR CROPLAN WHEAT VARIETIES.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 33.1bu/A average yield response advantage¹ when varieties are managed according to their Response to Nitrogen (RTN).
- Then, there's a 20.8bu/A average yield response advantage¹ when varieties are managed according to their Response to Fungicide (RTF).

Lesser Wheat May Give Up During Harsh Winters, But Not CROPLAN Wheat.

EACH VARIETY IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every product into the same environment won't maximize your ROI. Instead, give each variety what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN provides this level of intelligence. And you can only find CROPLAN varieties at the best retailers in America.

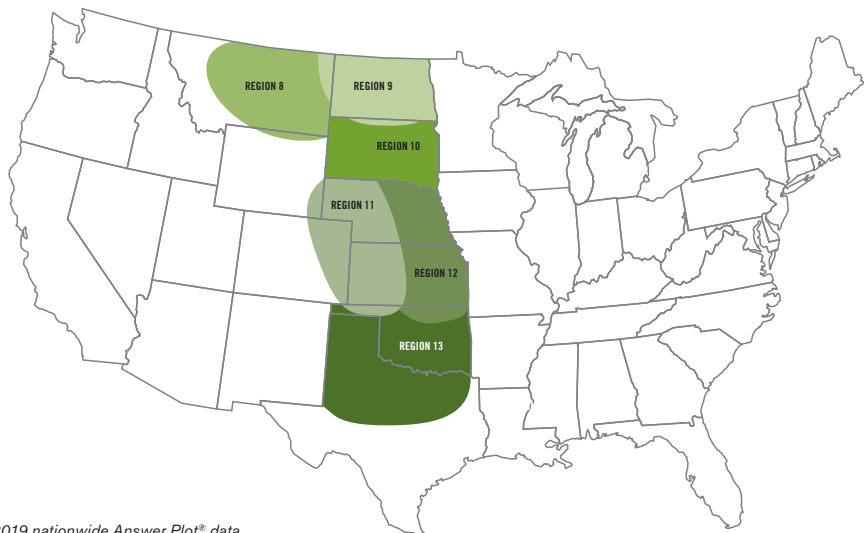

REVOLUTIONARY GRASSY WEED CONTROL

CROPLAN seed is pleased to offer the CoAXium Wheat Production System in part of our wheat lineup. Created in part by wheat farmers for wheat farmers, this system provides cost- effective, excellent control of annual and perennial grasses, higher quality grain, and increased yield potential.

Additionally, it combines elite wheat varieties, the AXigen® trait and Aggressor® herbicide with an industry-wide stewardship program. AXigen® is an ACCase herbicide-tolerant trait that protects wheat varieties from Aggressor® herbicide, which delivers effective, consistent, broad-spectrum control of problem grasses.

When used in conjunction with CoAXium® varieties, Aggressor® herbicide provides systemic and selective broad-spectrum control of these problem grasses:

- Barnyard grass
- Bromus species, including ALS-resistant biotypes
- Feral and cereal rye
- Jointed goat grass, including ALS-resistant biotypes
- Wild oats (non-resistant Group1)
- Volunteer cereals

CROPLAN CP7220

Hard Red Winter

Response Scores

Characteristics

	Not Recommended					Excellent				
Standability	2	2	2	2	2	2	2	2	2	2
Fusarium Head Blight	3	3	3	3	3	3	3	3	3	3
Test Weight	1	1	1	1	1	1	1	1	1	1
Protein	2	2	2	2	2	2	2	2	2	2
Winterhardiness	2	2	2	2	2	2	2	2	2	2

- Broadly adapted for Northern Neb. through Dakotas and into Mont.
- Very good standability and stress tolerance allows for placement from high to low yield potential acres
- Strong baking qualities
- Fungicide recommended in areas with Leaf and Stripe Rust

CROPLAN CP7909

Hard Red Winter

Response Scores

Characteristics

	Not Recommended					Excellent				
Standability	2	2	2	2	2	2	2	2	2	2
Fusarium Head Blight	4	4	4	4	4	4	4	4	4	4
Test Weight	3	3	3	3	3	3	3	3	3	3
Protein	1	1	1	1	1	1	1	1	1	1
Winterhardiness	2	2	2	2	2	2	2	2	2	2

- Excellent yield potential with high protein potential
- Very good winterhardiness
- Broad adaptation over a variety of conditions; outstanding yield potential in high-yield environments
- Excellent soilborne mosaic virus resistance

CROPLAN CP7869

Hard Red Winter

Response Scores

Characteristics

	Not Recommended					Excellent

TECHNOLOGY

PROPER MANAGEMENT PROTECTS TECHNOLOGY'S VALUE

Sound management practices and compliance with stewardship requirements will help protect the benefits and value of biotech trait seed technology for future generations.

INSECT RESISTANCE MANAGEMENT

Insect-protected crops are genetically improved to provide in-plant protection against selected insect pests. Beneficial insects are not affected. To preserve the benefits and insect protection of these technology crops, Bayer CropScience, Syngenta Crop Protection and Corteva Agriscience have developed IRM guidelines that must be incorporated by everyone purchasing and planting insect-protected crops.

Verification Required The last patent on the original Roundup Ready® soybean trait expired a few years ago and U.S. farmers may legally plant saved seed from some varieties of soybean containing the Roundup Ready® soybean trait. However, it is important that you check with your seed supplier to determine if a specific Roundup Ready® soybean variety is covered by other intellectual property rights, and if so, the policy for saving seed of that variety.

Higher Seeding Rate A higher seeding rate may be required for bin-run Roundup Ready® soybeans compared to new branded seed.

Yield Loss Roundup Ready 2 Yield® soybean, Roundup Ready 2 Xtend® soybean, and XtendFlex® soybean varieties typically have a higher yield opportunity than Roundup Ready® soybean varieties.

Cleanout Loss Loss of seed and/or shrink occurs during the seed cleaning and handling processes for bin-run seed.

Seed Treatment Costs Treating your seed will add costs—both the cost of the treatment and the application of that treatment.

Lost Income Every bushel of saved seed you plant is a bushel you're not selling as commodity grain.

Increased Seed Management If you plan to save and bin-run Roundup Ready® soybeans for planting, you will have to manage your harvest operations and grain storage so that the seed isn't co-mingled with other seed that's covered by intellectual property rights.

High Value of New Branded Seed

Latest Technology

- // High-yielding soybean technologies
- // Better variety options
- // Leading seed treatment options

Customer Service

- // Dealer agronomic support before and after the sale
- // Replant policy support
- // Convenient packaging and delivery

Reliable Germination and Quality

- // Rigorously tested and meets U.S. Federal Seed Act requirements
- // Free of seed-borne diseases
- // Properly stored and conditioned

For a list of Bayer's trait patents go to cs.bayerpatents.bayer.com

For questions regarding seed intellectual property, or to anonymously report a saved seed tip, you can contact Bayer in the following ways:

1. Call 1-866-99-BAYER
2. Send a letter: Trait Stewardship, 622 Emerson Rd., Suite 150, Creve Coeur, MO 63141
3. Submit a contact request at cropscience.bayer.us/contact or scan the QR code

Bayer is a member of the Seed Innovation and Protection Alliance. Visit www.seedipalliance.com to learn more. SIPA™ is a trademark of the Seed Innovation and Protection Alliance.

Bayer is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal and state law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USES AND APPROVED FOR SUCH USE IN THE STATE OF APPLICATION. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with Roundup Ready 2 Xtend® soybeans or products with XtendFlex® Technology.

Roundup Ready® Technology contains genes that confer tolerance to glyphosate. Roundup Ready® 2 Technology contains genes that confer tolerance to glyphosate. Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Products with XtendFlex® Technology contain genes that confer tolerance to glyphosate, glufosinate and dicamba. Glyphosate will kill crops that are not tolerant to glyphosate. Dicamba will kill crops that are not tolerant to dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your seed brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs.

Contact your Bayer retailer, refer to the Bayer Technology Use Guide, or call the technical support line at 1-888-283-6847 for recommended Roundup Ready® Xtend Crop System weed control programs.

CROPLAN

CORN INSECT RESISTANCE MANAGEMENT OVERVIEW¹

QUICK COMPLIANCE GUIDE FOR DEALERS AND FARMERS

1 REFUGE SIZE

Plant the correct size refuge for the area and corn product.

► The Corn-Growing Area

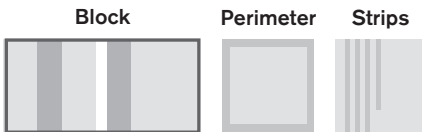

- 20% required for some B.t. products (20 acres of refuge for every 80 acres of B.t.)
- 5% only for SmartStax[®], Trecepta[®] and VT Double PRO[®] (5 acres of refuge for every 95 acres of B.t.)

► The Cotton-Growing Area

- 20% only for SmartStax[®] and VT Double PRO[®] (20 acres of refuge for every 80 acres of B.t.)

2 REFUGE LOCATION

Plant the required refuge within each field that contains B.t. insect-protected corn. There are other options, but an in-field refuge is always accepted. The refuge should always be a minimum of four contiguous rows wide.

3 REFUGE PLANTING

In each field, plant your refuge first before planting any insect-protected corn. This will ensure that the minimum refuge size requirement is met should unforeseen circumstances (e.g., adverse weather) alter your planting schedule and strategy. Use a refuge product that contains no B.t. insect-protection traits (e.g., Roundup Ready[®] or conventional corn are acceptable). Growers must read the IRM/Grower Guide for complete refuge planting requirements.

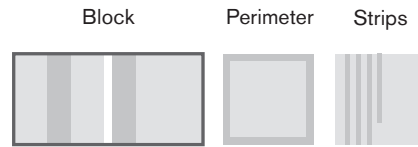

4 TREATMENT

If you need to treat your refuge with a non-B.t. foliar insecticide, you may have to treat the B.t. technology in a similar manner. Growers must read the IRM/Grower Guide for complete treatment options.

COMMON REFUGE CONFIGURATIONS

► In-Field Configuration Examples

Minimum of four rows

► Adjacent-Field Configuration Examples

Separated by road, path, ditch, etc., but not by another field

SEPARATE REFUGE CONFIGURATIONS

► Block

← ≤ 1/2 mile

← ≤ 1/2 mile

► Perimeter

← ≤ 1/2 mile

← ≤ 1/2 mile

1. Provided as a summary only. Farmers must read the IRM/Grower Guide prior to planting for important information on planting and insect resistance management.

2. Traited = B.t., RW or B.t./RW.

Content on this page provided by Bayer, please contact Bayer for more information. Due to factors such as weather, crop production patterns, product application and other factors, results to be obtained, including but not limited to yields or financial performance, cannot be predicted or guaranteed by Bayer or WinField United. Actual results may vary.

REFUGE REQUIREMENTS FOR BIOTECH CORN PRODUCTS^{1, 2}

	% NON-B.T. REFUGE	CONFIGURATIONS	REFUGE LOCATION
SMARTSTAX® RIB COMPLETE® CORN BLEND³	5% in the bag	—	No separate planted refuge is required
VT DOUBLE PRO® RIB COMPLETE® CORN BLEND³	5% in the bag	—	No separate planted refuge is required
DROUGHTGARD® HYBRIDS WITH VT DOUBLE PRO® RIB COMPLETE® CORN BLEND³	5% in the bag	—	No separate planted refuge is required
TRECEPTA® RIB COMPLETE® CORN BLEND	5% in the bag	—	No separate planted refuge is required
SMARTSTAX® CORN	5% corn-growing areas; 20% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to SmartStax® field; if adjacent, may be separated by a road, path, ditch, etc., but not another field
VT DOUBLE PRO® CORN	5% corn-growing areas; 20% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within, adjacent to or within 1/2 mile from VT Double PRO® field
AGRISURE® TOTAL	5% in the bag, 20% supplemental cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Agrisure® Total
VIPTERA™	5% in the bag 20% supplemental cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within, adjacent to or within 1/2 mile away from Viptera™ field
DURACADE™	5% in the bag 20% supplemental cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Duracade™ field
AGRISURE VIPTERA® 3111	20% corn- and cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Agrisure Viptera® 3111 field; if adjacent, may be separated by a road, path, ditch, etc., but not another field
AGRISURE® 3000GT	20% corn-growing areas; 50% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Agrisure® 3000GT field; if adjacent, may be separated by a road, path, ditch, etc., but not another field
HERCULEX® XTRA INSECT PROTECTION	20% corn-growing areas; 50% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Herculex® XTRA field; if adjacent, may be separated by a road, path, ditch, etc., but not another field
HERCULEX® I INSECT PROTECTION	20% corn-growing areas 50% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within, adjacent to or within 1/2 mile from Herculex® field

1. All refuge configurations require a minimum of four rows.

2. Provided as a summary only. Farmers must read the IRM/Grower Guide prior to planting.

3. SmartStax® RIB Complete®, Trecepta® RIB Complete®, VT Double PRO® RIB Complete® and DroughtGard® Hybrids with VT Double PRO® RIB Complete® corn blends are each a blend of 95% traited seed and 5% refuge seed interspersed in the bag and do not require a separate structured refuge in corn-growing areas.

For more detailed refuge requirements please visit: <https://traits.bayer.com/stewardship/Pages/Insect-Resistance-Management.aspx>

Corn trait technology incorporated into these seeds is commercialized under license from Syngenta Seeds, LLC. Herculex® Technology incorporated into these seeds is commercialized under license from Corteva Agriscience LLC. HERCULEX® and the HERCULEX Shield are trademarks of Corteva Agriscience LLC.

Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, post-emergent weed control of Liberty® herbicide for optimum yield and excellent weed control. LibertyLink®, Liberty® and the Water Droplet logo are registered trademarks of BASF.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium-based herbicides. Agrisure® and Viptera™ are trademarks of a Syngenta Group Company.

Content on this page provided by Bayer, Corteva Agriscience and Syngenta Group Company, please contact them for more information. Due to factors such as weather, crop production patterns, product application and other factors, results to be obtained, including but not limited to yields or financial performance, cannot be predicted or guaranteed by Bayer, Corteva Agriscience and Syngenta Group Company or WinField United. Actual results may vary.

EXCELLENCE THROUGH STEWARDSHIP

Bayer is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

Forage Genetics International, LLC ("FGI") is a member of Excellence Through Stewardship® (ETS). FGI products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with FGI's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Any crop or material produced from this product can only be exported to, or used, processed or sold only in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotechnology traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Growers should refer to biotradestatus.com for any updated information on import country approvals. Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

Corteva Agriscience is a member of Excellence Through Stewardship® (ETS). Corteva Agriscience products are commercialized in accordance with ETS product launch stewardship guidance Corteva Agrisciences Product Launch Stewardship Policy. No crop or material produced from this product can be exported to, used, processed or sold across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. For further information about your crop or grain marketing options, contact DAS at 877-4-TRAITS (877-487-2487). Information regarding the regulatory and market status of agricultural biotechnology products can be found at: www.biotradestatus.com.

INSECT RESISTANCE MANAGEMENT

IMPORTANT IRM INFORMATION: Always read and follow IRM requirements. Insect-protected crops are genetically improved to provide in-plant protection against selected insect pests. Beneficial insects are not affected. To preserve the benefits and insect protection of these technology crops, Bayer, Syngenta Crop Protection and Dow AgroSciences have developed insect resistance management (IRM) guidelines that must be incorporated by everyone purchasing and planting insect-protected crops.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal and state law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USES AND APPROVED FOR SUCH USE IN THE STATE OF APPLICATION. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with Roundup Ready 2 Xtend® soybeans or products with XtendFlex® Technology.

B.t. products may not yet be registered in all states. Check with your seed brand representative for the registration status in your state.

IMPORTANT IRM INFORMATION: RIB Complete® corn blend products do not require the planting of a structured refuge **except** in the Cotton-Growing Area where corn earworm is a significant pest. **See the IRM/Grower Guide for additional information. Always read and follow IRM requirements.**

Roundup Ready® Technology contains genes that confer tolerance to glyphosate. **Roundup Ready® 2 Technology** contains genes that confer tolerance to glyphosate. **Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Products with XtendFlex® Technology contain genes that confer tolerance to glyphosate, glufosinate and dicamba.** **Glyphosate** will kill crops that are not tolerant to glyphosate. **Dicamba** will kill crops that are not tolerant to dicamba. **Glufosinate** will kill crops that are not tolerant to glufosinate. Contact your seed brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs.

Insect control technology provided by **Vip3A** is utilized under license from Syngenta Crop Protection AG. **Herculex®** is a registered trademark of Dow AgroSciences LLC. **Agrisure Viptera®** is a registered trademark of a Syngenta group company. **LibertyLink®** and the **Water Droplet Design®** is a trademark of BASF Corporation. **Respect the Refuge** and **Corn Design®** and **Respect the Refuge®** are registered trademarks of National Corn Growers Association. **Acceleron®, DroughtGard®, RIB Complete®, Roundup Ready 2 Technology and Design™, Roundup Ready 2 Xtend®, Roundup Ready 2 Yield®, Roundup Ready®, SmartStax®, Trecepta®, TruFlex™, VT Double PRO® and XtendFlex®** are trademarks of Bayer Group.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.

Agrisure® Technology incorporated into these seeds is commercialized under license from Syngenta Seeds, Inc. **Herculex®** Technology incorporated into these seeds is commercialized under license from Dow AgroSciences LLC. **HERCULEX®** and the **HERCULEX shield** are registered trademarks of Dow AgroSciences LLC.

Seed products with the **LibertyLink® (LL)** trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, postemergent weed control of **Liberty®** herbicide for optimum yield and excellent weed control. **LibertyLink®, Liberty®** and the **Water Droplet logo** are registered trademarks of BASF Corporation.

Seeds containing the **Enlist®, Herculex®** and **PowerCore®** traits are protected under numerous US patents. Seeds containing patented traits can only be used to plant a single commercial crop and cannot be saved or replanted. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements detailed therein www.corteva.us/Resources/trait-stewardship.html. To plant **Enlist, Herculex and PowerCore** seed, you must have a limited license from Corteva Agriscience. In consideration of the foregoing, Corteva Agriscience grants to the Grower the limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed.

ALWAYS READ AND FOLLOW HERBICIDE LABEL DIRECTIONS PRIOR TO USE: **Enlist®** products contain the **Enlist** trait that provides crop safety for use of labeled over-the-top applications of glyphosate, glufosinate and 2,4-D herbicides featuring **Colex-D®** technology when applied according to label directions. Following burndown, the only 2,4-D containing herbicide products that may be used with **Enlist™** crops are products that feature **Colex-D** technology and are expressly labeled for use on **Enlist** crops. 2,4-D products that do not contain **Colex-D** technology are not authorized for use in conjunction with **Enlist** products. **Enlist** corn contains genes that confer tolerance to 2,4-D and -fop herbicides. 2,4-D and -fop herbicides will damage or kill crops that are not tolerant to 2,4-D or -fops.

IRM - Properly managing trait technology is key to preserving it as a long-term crop protection tool.

Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management**, for the biotechnology traits expressed in the seed as set forth in the Technology/Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation and agreement to comply with the most recent stewardship requirements.

Growers who fail to comply with IRM requirements risk losing access to this product. To help preserve the effectiveness of B.t. corn technologies, growers planting B.t. corn technologies are required to follow an IRM Plan. Consult the Corn Product Use Guide for appropriate refuge configuration options. Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, including applicable refuge requirements for insect resistance management, for the biotechnology traits expressed in the seed as set forth in the Technology Use Agreement and Product Use Guide. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements. For complete details on IRM requirements for hybrids with Bt technology, including refuge examples and important information on the use of insecticides on refuge and Bt corn acres, please consult appropriate Product Use Guide. Go to www.corteva.us/Resources/trait-stewardship.html to download the latest Corteva Agriscience Corn Product Use Guide.

Enlist E3[®] soybean seeds containing the Enlist[®] trait can only be used to plant a single commercial crop. It is unlawful to save and replant Enlist E3[®] soybeans. Additional information and limitations on the use of these products are provided in the Corteva Agriscience Technology Use Agreement and Enlist[®] Soybean Product Use Guide. U.S. patents for Corteva Agriscience technologies can be found at the following webpage: www.corteva.us/Resources/trait-stewardship.html.

Enlist Duo[®] and Enlist One[®] herbicides are not registered for sale or use in all states or counties. Contact your state pesticide regulatory agency to determine if a product is registered for sale or use in your area. Enlist Duo and Enlist One are the only 2,4-D products authorized for use with Enlist crops. Consult Enlist herbicide labels for weed species controlled. Always read and follow label directions. Enlist E3[®] soybeans were jointly developed by Corteva Agriscience and MS Technologies, LLC. Enlist, Enlist E3, the Enlist E3 logo, and Colex-D are trademarks of Corteva Agriscience. PowerCore[®] multi-event technology developed by Corteva Agriscience and Monsanto. Roundup[®], Roundup Ready[®], Roundup Ready 2 Technology and Design, and PowerCore[®] are registered trademarks of Monsanto Technology LLC. Liberty Link[®] and the Water Droplet Design[®] are registered trademarks of BASF. Enlist[®] and Colex-D[®] are trademarks of Corteva Agriscience and its affiliated companies. Excellence Through Stewardship is a registered trademark of Excellence Through Stewardship.

GENERAL DISCLAIMERS

Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the growers' fields.

Important: Always read and follow label instructions. Some products may not be registered for sale or use in all states or counties. Please check with your local extension service to ensure registration status.

SOYBEAN AND CANOLA PIRACY

Seed containing a patented trait can only be used to plant a single commercial crop. It is unlawful to save and replant seed from that crop. Examples of seed containing a patented trait include but are not limited to Roundup Ready 2 Yield[®] soybeans, Roundup Ready 2 Xtend[®] soybeans, XtendFlex[®] soybeans, Roundup Ready[®] spring canola, Roundup Ready[®] winter canola, and TruFlex[®] canola with Roundup Ready[®] Technology. Additional information and limitations on the use of these products are provided in the Technology Stewardship Agreement and the Bayer Technology Use Guide: tug.bayer.com. U.S. patents for Bayer technologies can be found at the following webpage: cs.bayerpatents.bayer.com

ALFALFA

HarvXtra[®] Alfalfa with Roundup Ready[®] Technology: Purchase and use of HarvXtra[®] Alfalfa with Roundup Ready[®] Technology is subject to a Seed and Feed Use Agreement, requiring that products of this technology can only be used on farm or otherwise be used in the following states: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. In addition, due to the unique cropping practices do not plant HarvXtra[®] Alfalfa with Roundup Ready[®] Technology in Imperial County, California, pending import approval and until Forage Genetics International, LLC (FGI) grants express permission for such planting. HarvXtra[®] Alfalfa with Roundup Ready[®] Technology has pending import approvals. GROWERS MUST DIRECT ANY PRODUCT PRODUCED FROM HARVXTRA[®] ALFALFA WITH ROUNDUP READY[®] TECHNOLOGY SEED OR CROPS (INCLUDING HAY AND HAY PRODUCTS) ONLY TO UNITED STATES DOMESTIC USE. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted.
